CLIMATOLOGICAL DATA

WISCONSIN SECTION

W. P. STEWART, Meteorologist

VOL. XXX MILWAUKEE, WIS., APRIL, 1925 No. 4

GENERAL SUMMARY

This month was considerably warmer and slightly drier than usual, with considerably more than the normal amount of sunshine. April has been warmer only once in the last 35 years. Monthly mean temperatures were considerably above the normal at all stations. The high averages were caused by almost continuously mild weather, rather than by any unseasonably warm days. On the other hand, no sub-zero temperatures occurred during the month.

The drought which had prevailed since the middle of March was not relieved in most sections until April 13th; thereafter, moisture was ample and well distributed. There was only about one-fourth of the usual April snowfall, and in no case did it remain on the ground more than two or three days. Several wind squalls during the month caused an aggregate property loss of about $11,000, and a severe hailstorm on the 22d damaged greenhouses severely in the vicinity of Milwaukee; the loss was estimated at $50,000.

The weather of the month as a whole was favorable for agriculture. The season was 10 days or more ahead of the average, and at the close of the month the seeding of small grains was practically completed, plowing for corn was general, and early canning peas and early potatoes were mostly planted.

PRESSURE

The mean sea-level pressure for the State, determined from the records of the regular Weather Bureau stations at Milwaukee, Madison, LaCrosse, and Green Bay, Wis., was 30.03 inches. The highest was 30.49 inches, at Madison on the 5th; the lowest 29.42 inches, at Milwaukee on the 19th.

TEMPERATURE

The monthly mean temperature for the State, determined from the records of 78 stations, was 49.0°, which is 5.6° above the normal. The departures varied from +2.9° at Cornucopia and High Falls, to +9.9° at New London. The highest monthly mean temperature was 56.2° at Prairie du Chien, and the lowest was 41.3° at Superior. The highest temperature reported during the month was 90°, at Kilbourn and Prairie du Chien on the 22d; and the lowest was 3°, at Long Lake on the 5th.

HUMIDITY

The average relative humidity for the State at 7:00 a.m., determined from the records of the regular Weather Bureau stations at Milwaukee, Madison, LaCrosse, and Green Bay, Wis., was 70 per cent, and at noon 52 per cent; at 7:00 p.m. the average for Milwaukee, Madison, and Green Bay was 56 per cent.

PRECIPITATION

The average for the State, determined from the records of 84 stations, was 2.10 inches, which is 0.41 inch less than the normal for April. The greatest monthly amount was 4.75 inches, at West Bend; and the least 0.89 inch, at Ashland. The greatest amount of precipitation in any 24 hours was 1.97 inches, at Racine on the 24th.

WIND

The prevailing direction was from the northeast. The average hourly velocity, determined from the records of the regular Weather Bureau stations at Milwaukee, Madison, LaCrosse, and Green Bay, Wis., was 9.5 miles. The maximum velocities at these stations were as follows: Milwaukee, 62 miles an hour from the southeast; Madison, 36 miles an hour from the northeast; La Crosse, 27 miles an hour from the south; Green Bay, 45 miles an hour from the northeast.

SUNSHINE

The actual sunshine in percentage of the possible was as follows: Milwaukee, 74; Madison, 66; LaCrosse, 63; Green Bay, 71.

MISCELLANEOUS PHENOMENA

Fog occurred at a few stations on the 19 and 22d.

Solar halos were observed on the 1, 2, 3, 6, 7, 8, 9, 10, 11, 12, 13, 14, 16, 18, 20, 21, 23, 27, 28, and 29th.

Parhelia were observed on the 5 and 11th.

Lunar halos were observed on the 3, 8, and 29th.

Lunar coronae were observed on the 7, 8, 9, and 29th.

Thunderstorms occurred on the 10, 11; 13, 14, 15, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, and 29th.

Sleet occurred on the 15 and 19th.

Hail occurred on the 13, 15, 17, 18, 19, 20, 21, 22, 23, 24, and 26th.

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXIII Parkersburg, W. Va., May, 1925 No. 5

GENERAL SUMMARY

May was exceptionally cool, especially the second and third decades, when heavy to killing frosts or freezing temperature occurred in practically all the northern and central counties. The month was also characterized by frequent hailstorms and by high wind in localities on the 24th. Following a warm April, which rapidly advanced farm work, germination and growth, the cold periods in the three decades in May caused great damage to crops. Much corn had to be replanted. The cold weather on the 27th killed potato vines, vegetables, and grapes in many localities of the northern counties Low temperature on the 8th, 12th, 19th, and 27th caused much damage to fruit, making apples drop badly. Excepting May in 1917 and 1924, the temperature was the lowest of May State record. The rainfall was considerably below the normal, but was sufficient for growth, except in the extreme eastern counties, where the conditions were droughty.

TEMPERATURE

The monthly mean for the State, determined from 53 stations, was 56.8°. The departure from the normal for 43 stations having ten or more years of record was — 4.8°. The temperature was near the normal or slightly above only on the 10th, 14-16th, 21st-23d, and 28th- 31st, with the highest readings on the 23d. Unusually cool weather prevailed from the 1st to the 9th, 17th to the 20th, and the 24th to the 28th, with the lowest readings occurring generally on the 8th and 27th.

PRECIPITATION

The average rainfall, determined from 85 stations, was 3.35 inches. The departure from the normal for 49 stations having ten or more years of record was —0.84 inch. Most of the rainfall was received on the 1st, 4-6th, 10-11th, 16-17th, 21st-22d, 24-25th, and 29th, the greatest amounts being measured on the 10-11th and 24-25th. Traces of snow fell in a few of the more elevated localities on the 1st, 5th, and 6th.

LIGHT HAIL

Light hail fell in sections of the following counties on the dates given: 1st.—Harrison, Lewis, Ohio and Wood. 2d.—Harrison. 4th.—Lewis, Monongalia, Randolph and Upshur. 6th.—Harrison. 10th and 11th.—Grant. 16th.—Mingo. 18th.—Berkeley. 24th.—Grant, Harrison, Ohio, Randolph, Roane, Summers, Upshur, Webster and Wirt. 25th.—Berkeley, Brooke and Grant.

HEAVY HAIL

On May 4, about 1:30 p. m., a heavy hail storm moved eastward over Parkersburg, being heaviest over the northern portion of the city. The path of the storm was about one-half mile in width and the storm moved about six miles. In north Parkersburg gardens and fruit trees were considerably damaged. The stones were about the size of a small marble. The loss from this storm was not more than $500.00.

On May 24, about 2:15 p. m., a destructive hail storm moved southwestward from near Beverly to Mill Creek, Randolph County, about 12 miles. The path of the storm was from two to three miles in width. Shingles and rubberoid on several roofs were destroyed, windows on the west side of buildings broken, and crops and apples much injured. Many of the stones were an inch in diameter and some were reported as being nearly two inches in diameter. The approximate loss was about $25,000.

HIGH WINDS

About 2 p. m., May 21, a destructive wind storm, attending a severe electric storm, passed in an easterly direction over Barbour, Taylor, and northern Randolph counties into Tucker County. The greatest property loss occurred at Valley Bend and Huffman, Randolph County. At Valley Bend, Antioch church was moved from its foundation, its sides bulged and windows broken. Many trees were also uprooted. At Huffman, about four and one-half miles from Valley Bend, two barns were destroyed, one small house blown from its foundation and torn to pieces, and several small buildings damaged. At Huffman a funnel-shaped cloud was observed. Another observer described the cloud as wedge-shaped, the sharp end forward and downward. At Pierce, about 20 miles northeast of Huffman, the storm demolished a coal tipple, killing three boys who had taken refuge under it. So far as known, the damage caused by this storm was approximately $20,000.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for May, 1925

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXIII PARKERSBURG, W. VA., JUNE, 1925 No. 6

GENERAL SUMMARY

The past month was exceptionally warm, especially the first and second decades, the average temperature, 72.2°, being the highest of June State record, except in 1892, 1919 and 1921. Maximum temperatures of 100° or slightly above occurred at sixteen stations. As a rule, however, the night temperatures were only moderately above the normal. The precipitation averaged considerably below the normal and was unfavorably distributed, the conditions being droughty until the 16th. The rainfall over the eastern counties was also insufficient for growth during nearly the entire month. The month was free from damaging storms. Corn was backward early in the month but made excellent growth during the last two decades. Wheat also improved and the crop was in fair to good condition at the close of the month. The potato crop was injured by high temperature and lack of moisture. At the close of the month haying and wheat cutting were general, with fair to good yields, and pastures were generally good.

TEMPERATURE

The monthly mean for the State, determined from 46 stations, was 72.2°. The departure from the normal for 35 stations having ten or more years of record was +3.1°. The temperature was above the normal from the 1st to the 9th and the 13th to the 23d, the highest readings occurring generally on the 4th and 5th. The temperature was near the normal on the 10-12th and was slightly below the normal daily after the 23d.

PRECIPITATION

The average precipitation for the State, determined from 82 stations, was 3.51 inches. The departure from the normal for 43 stations having ten or more years of record was −0.51 inch. The rainfall was heaviest over the central counties and lightest over the eastern and southern counties. Most of the rainfall was received from the 6th to the 10th, 14th to the 18th, 23d to the 25th, and on the 28-29th, the greatest amounts being measured on the 7th, 16th, 18th, 25th, and 29th.

HAIL

Light to moderate hail fell in sections of the following counties n dates given herewith: 6th -Berkeley, Grant, Lewis, Marshall, Iineral, Ohio, Randolph, and Tucker. 7th.-Randolph. 9th.-Ionongalia. 10th.-Lewis, Randolph, and Upshur. 25th.-Vebster. 28th.-Wetzel. On the 6th the hail was moderately eavy at Bayard, Grant County; Burlington, Mineral County; nd Martinsburg, Berkeley County. It was also moderately eavy at Wymer, Randolph County, on the 10th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missingdays; for example, ^{b} represents two days, etc.

Daily Precipitation for June, 1925

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

VOL. XXXIII   PARKERSBURG, W. VA., JULY, 1925   No. 7

GENERAL SUMMARY

While July averaged slightly cooler than usual, the month was characterized by unusually warm weather during the first two decades, the temperature being continuously above and generally much above the normal from the 2d to the 17th. The last two weeks, in marked contrast to the previous conditions, were continuously cool, with temperatures on two or three days near the low July State record. The rainfall was generally near or considerably above the normal and quite favorably distributed, except over the extreme eastern and southern counties, where the amounts received were insufficient. The conditions were generally excellent for growth, especially until the 20th. At the close of the month the outlook for corn was the best for several years. Wheat, oats, meadows, and pastures also made much improvement during the month. The potato crop, however, was much injured by high temperature.

TEMPERATURE

The monthly mean for the State, determined from 51 stations, was 72.2°. The departure from the normal for 41 stations having ten or more years of record was −0.9°. The highest temperatures occurred generally on the 6th and 7th, although the maximum temperatures at most stations were near or above 90° from the 2d to the 17th. At four of the mountain stations light frost was observed on the 1st. The lowest temperatures occurred on the 1st and 29th. A temperature of 35° occurred at Bayard and Terra Alta on the 1st. At Cheat Bridge, Randolph County, a temperature of 31° was registered on the 29th, the lowest of July State record. A light frost was observed at Bayard on the 29th.

PRECIPITATION

The average precipitation for the State, determined from 83 stations, was 5.05 inches. The departure from the normal for 50 stations having ten or more years of record was +0.21 inch. The rainfall was heaviest over the central and north-central counties and lightest over the eastern and extreme southeastern ounties. Most of the rainfall was received on the 2-3d, 5th, -8th, 9-12th, 16-17th, 20th-22d, and 30th-31st, the greatest mounts being measured on the 2-3d, 5th, 8th, and 11-12th.

LIGHT HAIL

Light hail fell in sections of the following counties as noted below: 2d.—Harrison, ewis, Monongalia, Ohio, Wetzel, and Wood. 12th.—Webster. 13th.—Raleigh. 15th.—onongalia. 17th.—Upshur.

MODERATE HAIL

Moderate hail storms occurred on the 2d at Cheat Bridge, Randolph County, and amlin, Lincoln County. Moderate hail fell over a small area at Shepherdstown, fferson County, on the 28th. The storm moved from the south, with path about one-lf a mile in width. Some of the stones were as large as small marbles. Only slight mage resulted from these storms, although fruit and corn was slightly damaged in fferson County, and tobacco in Lincoln County.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are u
determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

CHARLES F. MARVIN, Chief

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXIII PARKERSBURG, W. VA., AUGUST, 1925 No. 8

GENERAL SUMMARY

The temperature for August averaged nearly 1° below the normal and the month was about equally divided into periods of moderately warm and moderately cool weather. However, the temperature on the 22d-25th was low, and light frosts were observed in localities of the northern mountain region on those dates.

The average rainfall, 1.86 inches, was the least of August State record, the previous August record being 2.03 inches in 1910. The rainfall was deficient at every station except one-Bayard. While the rainfall was generally well distributed over the State and throughout the month, the drought was most severe over the southeast counties and practically no rain fell from the 21st to the 31st. Corn was in excellent condition until after the 21st, but hot and dry weather during the last decade caused much damage to the crop. At the close of the month the rivers and streams were unusually low and stock-water was scarce in many localities. The month was practically free from damaging storms until the 31st. A severe hail storm occurred on the 31st in the Gerrardstown and Inwood sections of Berkeley County, causing much damage to the apple crop.

TEMPERATURE

The monthly mean for the State, determined from 51 stations, was 70.7°. The departure from the normal for 40 stations having ten or more years of record was —0.9°. The month opened cool and the temperature was also considerably below the normal from the 21st to the 26th. Moderately warm weather prevailed from the 9th to the 19th and during the last three days. The highest readings occurred generally on the 10th, 13th, 17th, and 30th, and the lowest readings on the 22d.

PRECIPITATION

The average precipitation for the State, determined from 84 stations, was 1.86 inches. The departure from the normal for 51 stations having ten or more years of record was —2.14 inches. Most of the rainfall was received on the 11-14th, 18th-21st, and 31st, but scattered light showers occurred in many localities daily from the 1st to the 9th. The greatest monthly amount, .92 inches, fell at Bayard, and the least, 0.20 inch, at Camden-n-Gauley.

LIGHT HAIL

Light hail fell in sections of the following counties on dates as given: Preston ounty, 7th; Grant, Lewis, Monroe, and Preston Counties, 21st; Lewis and Wood ounties, 31st.

DESTRUCTIVE HAIL

About 3:30 p. m., August 31, a destructive hail storm passed south-southeastward er the fruit orchards in the Gerrardstown and Inwood districts, Berkeley County. e path of the storm was about two miles in width and the storm was severe for eral miles. The stones ranged in size from about one-eighth to three-fourths of an ch in diameter. The loss was mostly confined to the apple crop and was proximately $100,000.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 2d, 5th, 6th, 10th, and 15th; Bancroft, 2d, 4th, 5th, 11th, 16th, 23d, 25th, and 27th; Elkins, 2d to the 4th, 7th, 8th, 11th, 15th, 17th, 22d, 24th, 25th, and 26th; Mannington, 1st, 4th, 5th, 10th, 15th, 19th, 20th, 22d, and 27th; Moundsville, 26th; New Cumberland, 11th, 15th, 25th, and 26th; Parkersburg, 15th; Terra Alta, 13th and 15th.

Frost, light: Arbovale, 23d and 24th; Bayard, 22d, 23d, 24th, and 25th; Cheat Bridge, 23d and 24th; Davis, 22d and 23d; Horton, 22d, 23d, and 24th; Terra Alta, 22d and 24th; Stony River Dam, 22d and 23d.

Thunderstorms [dates and number of stations reporting]: 1st, 1; 2d, 5; 3d, 1; 4th, 2; 5th, 9; 6th, 3; 7th, 3; 9th, 1; 10th, 2; 11th, 5; 12th, 6; 13th, 11; 14th, 5; 18th, 1; 20th, 3; 21st, 4; 31st, 13.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are use determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for August, 1925

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

VOL. XXXIII PARKERSBURG, W. VA., SEPTEMBER, 1925 No. 9

GENERAL SUMMARY

The past month was the warmest September of State record, except in 1921, when the average temperature was the same, 70.9°. Lower temperatures were also recorded in every other September, except in 1920 and 1921. With the exception of two or three days in the last decade, the month was continuously warm. However, the month was mainly characterized by dry weather and unfavorably distributed rain. In many localities stock-water was scarce, and crops of late growth were practically destroyed by lack of moisture and high temperature. The drought was especially severe in the middle and lower portions of the Little Kanawha Valley and in most of the eastern counties Corn, especially late-planted, was much damaged. The month was free from severe storms. At the close of the month corn was mostly in the shock, threshing was well advanced, and winter wheat was being sown.

TEMPERATURE

The monthly mean for the State, determined from 51 stations, was 70.9°. The departure from the normal for 41 stations having ten or more years of record was +5.0°. The month opened warm and the temperature was continuously above the normal until the 21st. The highest readings were recorded on the 9-12th and 18-20th. The 22d and 23d were somewhat cooler than usual for the season, and the averages for the 24th and 25th were practically normal. The last four days were moderately warm.

PRECIPITATION

The average precipitation for the State, determined from 84 stations, was 2.29 inches. The departure from the normal for 50 stations having ten or more years of record was −0.73 inch. The rainfall was heaviest over the central and mountain counties, and lightest over the central and lower portions of the Little Kanawha Valley. Light showers fell in many localities on the 3d, 7th, 10th, and 12th. Heavy rain, however, fell at Kanawha Falls on the 7th. Light to moderate rain was quite general on the 13th, 14th, 15th, and 16th. There were also light to moderate showers on the 20th, 21st, 23d, and 27-28th. The rainfall was heaviest on the 13th, 15th, and 16th.

LIGHT HAIL

Light hail fell in sections of Berkeley County on the 13th, and in sections of Randolph County on the 15th.

MISCELLANEOUS PHENOMENA

Fogs, dense: Bancroft, 2d, 5th, 6th, 16th, 17th, 24th. 27th, 9th, and 30th; Bayard, 1st, 15th, and 17th; Davis, 28th and 9th; Elkins, 2d, 4th. 5th, 17th, 23d, 24th, 25th, and 29th; Huntington, 17th and 29th Mannington, 4th, 9th, and 17th; Marlinton, 1st, 4th to the 7th, 9th to the 12th, 17th to the 0th, and from the 24th to the 29th: New Cumberland, 2d, 4th, 6th, 7th, and 17th; Parkersburg, 17th; Rowlesburg, 2d, 4th, 5th, 11th, 12th, and 18th; St. Marys, 1st, 4th, 5th, and 17th; Terra Alta, 1st, 4th, and 17th; Wellsburg, 1st; Wheeling, 4th and 5th.

Frost, heavy: Bayard, 26th

Haze, light: Bayard, 4th, 9th, and 12th; Terra Alta, 6th, 8th, 9th, and 11th.

Thunderstorms (dates and number of stations reporting): 1st, 5; 3d, 8; 4th, 1; 5th, 1; 12th, 4; 13th, 4; 19th, 1; 20th, 2; 21st, 3; 27th, 2; 28th, 2.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for September, 1925

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorolcgist

VOL. XXXIII PARKERSBURG, W. VA., OCTOBER, 1925 No. 10

GENERAL SUMMARY

The past month was by far the wettest October of State record, the average precipitation, 7.30 inches, exceeding that of the previous wettest October by nearly 1 50 inches. It was also wetter than any September, November, or December of State record. Rain was recorded at four or more stations on every day of the month, and at nine stations the monthly amounts exceeded 10 inches. The average snowfall, 4.3 inches, was also exceptionally heavy, but not as heavy as in October, 1917. As a rule, the snowfall for October is unimportant. While the streams and smaller rivers were high, flood stages were not noted. The month was also exceptionally cloudy and cold. Since 1895 the average State temperature for October has been 50° or above, except in 1917, when the average was 49.2°, and for the present month, with an average of 49.3°. The average number of cloudy days, 19, was the greatest of October State record. In most of the agricultural districts the first frost of the season was a killing frost on the 10th, which caused much damage to late vegetation The month was exceptionally unfavorable for outdoor work and shocked corn. Much corn was damaged by continued wet weather.

TEMPERATURE

The monthly mean for the State, determined from 53 stations, vas 49.3°. The departure from the normal for 44 stations aving ten or more years of record was —6.0°. The temperaure was somewhat above the normal from the 1st to the 5th and he 14th to the 18th, with the highest readings occurring generlly on the 1st and 3d. From the 7th to the 14th and the 19th o the 31st, inclusive, the temperature was below the normal, he periods from the 9th to the 12th, the 19th to the 23d, and om the 28th to the end of the month being exceptionally cold r the season. The lowest temperatures generally occurred on e 29th.

PRECIPITATION

The average precipitation for the State, determined from 84 ations, was 7.30 inches. The departure from the normal for) stations having ten or more years of record was +4.44 inches. he precipitation was heaviest over the central and mountain unties and was lightest over the extreme eastern counties. e greater part of the precipitation was recorded on the 2d-5th, h, 9-10th, 12-17th, 22d, 24-25th, and 29-30th, the greatest ounts being measured on the 4th, 16-17th, and 24-25th. ght snow fell in many mountain localities on the 10th and st-22d, but most of the snowfall was received on the 29-30th.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, Davis, and Moundsville, 14th; Bruce Mills. 22d; Stony River Dam, 2d, 13th, 14th, 18th, and 31st; Terra Alta, 15th and 22d.

Hail: Creston, 4th.

Halos, lunar: Bayard, 23d and 24th.

Sleet: Bayard, 22d; Cairo, 19th; Clarksburg, 10th; Lost Creek, 10th and 20th; Moundsville, 28th; Stony River Dam, 22d; Pickens, 25th.

Thunderstorms (dates and number of stations reporting): 2d, 1: 3d, 7; 4th, 10; 5th, 3; 16th, 2, 17th, 1; 26th, 1.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are use determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for October, 1925

CHARLES F. MARVIN, Chief

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXIII Parkersburg, W. Va., November, 1925 No. 11

GENERAL SUMMARY

November was wet and somewhat colder than usual. The average precipitation, 3.66 inches, was practically 1 inch above the normal, and was the greatest of State record for November, except in 1897, 1912, 1919, and 1921. However, compared with the previous month, October, the month seemed only slightly wet. While the temperature averaged more than 2° below the normal, there were no decidedly cold periods, the month being characterized by four rather long periods of moderately cold weather. The lowest temperature noted was 6°, and lower readings were recorded in November in fourteen of the past thirty-five years. The snowfall was much below the normal and was unimportant in nearly all the agricultural districts. The conditions were generally unfavorable for shocked corn, late threshing and potato digging, and for outdoor work in general.

TEMPERATURE

The monthly mean for the State, determined from 52 stations, was 40.6°. The departure from the normal for 44 stations having ten or more years of record was —2.4°. The month opened cold, and the temperature was also considerably below the normal from the 8th to the 11th, 16th to the 18th, 21st to the 24th, and during the last three days, with the lowest readings occurring generally on the 29th. From the 11th to the 15th and the 25th to the 27th the temperature was somewhat above the normal, with the highest readings generally on the 15th.

PRECIPITATION

The average precipitation for the State, determined from 86 stations, was 3.66 inches. The departure from the normal for 52 stations having ten or more years of record was +1.05 inches. While the precipitation was quite favorably distributed, the monthly amounts were greatest over the mountain portions of the State and least over the extreme eastern counties. Most of the precipitation was received on the 3d, 5-6th, 7-8th, 12-13th, 15-16th, and 27th, the greatest amounts being recorded on the 8th, 12-13th, 16th, and 27th. Snow or snow flurries occurred in many sections on the 9th, 16th, and 22-23d, the heaviest snow falling on the 16th.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 2d and 3d; Bayard, 3d, 6th, and 7th; Elkins, 3d; Mannington, 3d; Moundsville, 2d and 3d; New Cumberland, 1st and 2d; Pickens, 2d; Pt. Pleasant, 1st; Terra Alta, 6th; Wellsburg, 3d.

Halo, lunar: Bayard, 25th.

Sleet: Camden-on-Gauley, 27th; Lost Creek, 16th; Martinsburg, 26th; Parkersburg, 15th; Wheeling, 13th.

Thunderstorms: Camden-on-Gauley and Wheeling, 13th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries. Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days: for example, ^{b} represents two days, etc.

Daily Precipitation for November, 1925

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

VOL. XXXIII PARKERSBURG, W. VA., DECEMBER, 1925 No. 12

GENERAL SUMMARY

The average precipitation for the past month, 1.20 inches, was the least of December State record, being .30 inch below the record for the dry December in 1917. The snowfall was also exceptionally light, but was somewhat heavier than in December in 1900, 1911, and 1924. The temperature averaged about 2° below the normal, the deficiency for the month being caused by a cold wave during the last five days. Owing to light rainfall, the streams and rivers were especially low, causing a scarcity of water for stock and industrial purposes in many localities. The conditions were unfavorable for winter grains, the ground being bare in most of the agricultural districts nearly the entire month.

TEMPERATURE

The monthly mean for the State, determined from 53 stations, was 32.5°. The departure from the normal for 45 stations having ten or more years of record was —1.0°. The temperature was slightly or considerably above the normal until the 14th, except the 10th, when the average temperature was somewhat below the normal. The 20th and 21st were also moderately warm for the season. From the 14th to the 19th the daily averages were generally only slightly to moderately below the normal, but cold weather prevailed from the 26th to the end of he month, with the lowest temperatures ranging generally from ero to 5° below zero on the 27th, 29th, and 30th.

PRECIPITATION

The average precipitation for the State, determined from 86 tations, was 1.20 inches. The departure from the normal for 2 stations having ten or more years of record was —2.21 inches. he precipitation was heaviest over the mountain and southastern counties, and was lightest over the western counties. ost of the precipitation was received on the 2-3d, 5th, 14-th, 21st-22d, and 25-26th, but there were scattered light ins or snows on the 9-10th, 20th, 23-24th, and 27-28th. he greatest amounts were measured on the 5th and 22-23d. ight snow or snow flurries were noted in sections of the northn and mountain counties on the 6th, 9-10th, and 15-17th. ght to moderate snow fell in nearly all localities on the 22-d, and snow flurries were noted from the 24th to the 28th d on the 30th.

MISCELLANEOUS PHENOMENA

ogs, dense: Arbovale, 4th; Bayard, 9th and 16th; Bruceton lls, 2d; Davis, 4th: Elkins, 4th; Gary, 21st; Grafton, 22d; rton, 2d, 5th, and 16th; Marlinton, 4th; Parkersburg, 21st; Pickens, 16th; Romney, 4th; Terra Alta, 2d, 4th, and 20th.

Halos, lunar: Elkins, 23d; Parkersburg, 24th.

Halo, solar: Bayard, 23d.

Sleet: Arbovale, 20th; Davis, 10th and 16th; Elkins, 5th and 20th; Fairmont, 6th; Marlinton, 21st; Morgantown, 16th; Moundsville, 9th; Pickens, 9th; Pt. Pleasant, 22d; Stony River Dam, 9th.

Thunderstorms: Arbovale, 5th; Cairo, 21st; Horton, 5th and 15th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are us determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for December, 1925

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXIII PARKERSBURG, W. VA., YEAR, 1925 No. 13

GENERAL SUMMARY

Compared with previous State averages, the year 1925 was slightly warm and somewhat dry, with the snowfall below the normal.

A cold wave occurred late in January, but the temperature for the other winter months was above the normal, except December, February being exceptionally warm for the season. The early spring months and June and September were also warmer than usual, the temperature in September being exceptionally high. May, July, August, October, November, and December were cool months.

The precipitation was generally light during the winter months, especially December, while the rainfall during the period of growth was ample until August, when a drought, vhich continued through September, set in. October was xceptionally wet.

May was cold and decidedly unfavorable for germination and growth, during June and July the conditions were favorable for ll crops, a drought set in during August, and high temperature nd lack of moisture in September caused a shortage of the corn rop and dried up fields and pastures.

The season of growth extended generally from late in May ntil October 10, being considerably shorter than usual.

The average cloudiness was near the normal. The sunshine t Parkersburg averaged 46 per cent of the possible amount, or ormal. The average at Elkins was 51 per cent, or 6 per cent bove the normal.

The wind movement at Parkersburg was 45,868 miles and at lkins 45,971 miles.

THE WEATHER BY MONTHS

JANUARY.—The temperature was near or considerably above the normal until into last decade. Exceptionally cold weather prevailed on the 27-28th, when the tem- ature was generally the lowest of State record since 1918. The precipitation was htly below the normal and was mostly snow. During the cold period there was a d snow-cover.

FEBRUARY.—The average temperature for February was the highest of February te record, except in 1909. The temperature fell to zero at only one station. The cipitation was light, except in a few sections of the southern counties. The average wfall, 2.0 inches, was the least of February State record. The conditions were orable for stock and winter grains.

MARCH.—March was exceptionally pleasant and the temperature was nearly con- ously above the normal after the 4th until the 28th. Low temperature on the 3d sed considerable damage to fruit trees. The precipitation was considerably deficient. he agricultural districts the ground was bare nearly the entire month, making the ditions somewhat unfavorable for winter grains.

Continued on page 51

THE WEATHER BY MONTHS

Continued from page 49

APRIL.—This month was characterized by much warmer and considerably drier ther than usual. The temperature was exceptionally high near the middle of the d decade, causing fruit trees to bud and a rapid advancement in farm work. Freez- temperature on the 21st over the eastern counties caused much damage to fruit. l weather at the close of the month was also decidedly unfavorable for germination growth. Destructive winds on the 19th caused considerable damage.

MAY.—Exceptionally cool weather prevailed in the second and third decades, giving y to killing frosts in the central and northern counties. Hail storms were frequent high winds prevailed in localities on the 24th. Much corn had to be replanted and t was much damaged. Excepting May in 1917 and 1924, the average temperature the lowest of State record for May. The rainfall was below the normal.

JUNE.—June was exceptionally warm. Maximum temperatures of 100° or slightly ve occurred at 16 stations. The night temperatures, however, were generally favor- . The rainfall was considerably below the normal and the conditions were gener- droughty, especially over the eastern counties. Corn was backward early in the th but made excellent growth during the last two decades. The potato crop was aged by high temperature and lack of moisture.

JULY.—The temperature was continuously above and generally much above the nor- from the 2d to the 17th. The last two weeks were continuously cool, with the tem- ture on two or three days near the low State record for July. The temperature was exceptionally low on the 1st, when a temperature of 31° occurred at Bayard and a Alta. A light frost was observed at Bayard on the [illegible] The rainfall was tly above the normal.

AUGUST.—August averaged slightly cooler than usual, and the month was about equally divided into periods of moderately warm and moderately cool weather; but unusually low temperature for August occurred on the 22d-25th, when light frosts were observed in localities of the northern mountain region. The average rainfall, 1.86 inches, was the least of August State record, making the conditions especially droughty, especially over the southeastern counties, where practically no rain fell from the 21st to the 31st. A severe hailstorm on the 31st in the Gerrardstown and Inwood sections of Berkeley County caused much damage to the apple crop.

SEPTEMBER.—The past month was the warmest September of State record, except in 1921, when the September average was the same, 70.9°. The month was also dry, the conditions being decidedly droughty, especially over the eastern counties. Corn, especially late-planted, was much damaged. At the close of the month corn was mostly in the shock, threshing well advanced, and the sowing of winter grains commenced.

OCTOBER.—The past month was by far the wettest October of State record, the average rainfall, 7.30 inches, exceeding that of the previous wettest October by nearly 1.50 inches. Rain was recorded at four or more stations on every day of the month, and at nine stations the monthly amounts exceeded 10 inches. The weather was also exceptionally cloudy and cold. In most agricultural sections the first frost of the season was a killing frost on the 10th, which caused much damage to late vegetation. Much corn was damaged by wet weather.

NOVEMBER.—November was also wet and somewhat colder than usual. The month was characterized by four rather long periods of moderately cold weather and by light snowfall. The conditions were unfavorable for late farm work.

DECEMBER.—The last month in 1925 was the driest of December State record. The snowfall was also exceptionally light. The temperature averaged considerably below the normal, owing to a cold wave that prevailed during the last five days. The streams and rivers were especially low, causing a scarcity of water for stock and industrial purposes. The conditions were unfavorable for winter grains.

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXIV Parkersburg, W. Va., January, 1926 No. 1

GENERAL SUMMARY

January averaged considerably colder and slightly drier than usual. The month was characterized by moderately heavy snow, with unusually low temperature during the last decade. During the period of lowest temperature, however, the snow-cover was generally ample to protect winter grains: but some damage resulted to young fruit trees in a few localities. Moderately heavy rain and melted snow on the 21st-22d caused decided rises in the smaller rivers and moderate stages in the Ohio River. The Little Kanawha River at Glenville reached a stage of 23.3 feet and the Ohio River at Point Pleasant reached stage of 38.7 feet. Floating ice caused a suspension of boating on the Ohio River for several days. Stock was in good condition at the close of the month.

TEMPERATURE

The monthly mean for the State, determined from 50 stations, vas 29.7°. The departure from the normal for 40 stations iaving ten or more years of record was —2.5°. The temperture was considerably above the normal from the 2d to the 7th nd the 17th to the 21st, and somewhat above on the last two ays, with highest readings occurring on the 5th, 18th, and 0th. Moderately cold weather prevailed from the 13th to the 8th, with lowest temperatures on the 12th and 13th for that eriod. Another cold period extended from the 22d to the 9th, with the temperatures on the morning of the 29th ranging nerally from near zero to more than 20° below zero.

PRECIPITATION

The average precipitation for the State, determined from 85 ations, was 3.71 inches. The departure from the normal for stations having ten or more years of record was —0.25 inch. ie precipitation was generally heaviest over the southern and ntral counties and lightest over the northwestern counties. ie greater part of the precipitation was received on the 4-5th, 9th, 17-18th, 21st-22d, 27-28th, and 31st, the greatest amounts ing measured on the 18th and 21st-22d; but light and more less scattered precipitation fell daily from the 10th to the h and on the 26th. Most of the snowfall was received on the 9th, 21st-22d, and 27-28th, but in the mountains light to derate snow also fell daily from the 10th to the 15th and on 25th and 27th.

MISCELLANEOUS PHENOMENA

ogs, dense: Arbovale, 4th, 18th, 21st, and 26th; Bancroft, h; Bens Run, 4th, 20th, and 22d; Bruceton Mills, 18th; Cairo, 4th; Elkins, 19th and 20th; Grafton, 4th, 17th, and 21st; Marlinton, 5th; Morgantown, 4th; New Cumberland, 21st; Terra Alta, 4th.

Halo, lunar: Elkins, 24th.

Sleet: Brownsville, 28th; Cairo, 21st; Elkins, 22d; Fairmont, 22d; Marlinton, 4th; Martinsburg, 22d.

Thunderstorms: Aberdeen, Brownsville, Bruceton Mills, Crawford, Elkins, Grafton, Horner, Lewisburg, Pickens, Terra Alta, and White Sulphur Springs, 18th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for January, 1926

CLIMATOLOGICAL DATA

MAY 6 1927

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXIV Parkersburg, W. Va., February, 1926 No. 2

GENERAL SUMMARY

The temperature and precipitation for February averaged onsiderably above the normal. The average temperature, owever, 34.9°, was nearly 5° below the February average for 925. The temperature fell to zero at only six stations, and he lowest recorded was 3° below zero. The average precipitaion, 4.01 inches, has been exceeded for February in only seven f the years of record, and is the heaviest of February record ince 1916. Notwithstanding the heavy precipitation and bnormally warm weather during the month, the rivers were nly at moderate stages, owing to the high temperature periods eing of short duration. The snowfall averaged more than rice the normal, and was the heaviest of February record, xcept in 1899 and 1914. The weather during the month was vorable for fruit and mostly favorable for winter grains.

TEMPERATURE

The monthly mean for the State, determined from the records 50 stations, was 34.9°. The departure from the normal for 2 stations having ten or more years of record was +2.6°. The mperature was above the normal on the 1st-3d, 7-9th, 13-15th, d 17-26th, with the highest readings occurring generally on e 21st. The temperature averaged slightly below the normal the 4-5th, 9th, 16th. 23d, and 27-28th, and generally much low on the 6th, 11th, and 10-12th, when the lowest readings the month were recorded.

PRECIPITATION

The average precipitation for the State, determined from the ords of 84 stations, was 4.01 inches. The departure from e normal for 47 stations having ten or more years of record s +0.87 inch. The precipitation was heaviest over the rthern mountain counties and lightest over the southern nties. Most of the precipitation was received on the 1st, 3d-, 8-11th, 13-15th, 18-19th, 22-23d, and 25-26th, the greatest ounts being recorded on the 3d-4th, 10th, 14th, 19th, and . Excepting some of the southern counties, snow was quite eral on the 3d-4th, 11-12th, 19th, 23d, and 26-27th. The ounts were generally light on the 19th and 23d and only w flurries were received in practically all regions on the 26-h. The snow was heavy in many localities of the northern untain counties on the 3d-4th and 10-11th. The fall was heavy in most of Marion County on the 3d-4th, where ut 24 inches were received for that storm. From the 3d to 13th the total falls were as follows: Fairmont, 34 inches; vis, 31.5 inches; Pickens, 41 inches.

MISCELLANEOUS PHENOMENA

ogs, dense: Arbovale, 14th; Bayard, 14th and 15th; Browns- , 14th; Bruceton Mills, 1st, 14th, and 19th; Marlinton, 18th; Pickens, 1st, 8th, and 13th.

Halos, lunar: Bayard, 18th, 20th, and 22d; Elkins, 20th; Parkersburg, 21st; Pickens, 20th.

Halo, solar: Bayard, 21st.

Sleet: Bayard, 1st, 2d, and 7th; Bens Run, 25th; Davis, 2d; Grafton, 1st; Marlinton, 19th; Martinsburg, 4th; Parkersburg, 19th; Stony River Dam, 7th.

Thunderstorms (dates and number of stations reporting): 9th, 2; 14th, 6; 18th, 2; 19th, 12; 25th, 5.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example ^{b} represents two days, etc.

Daily Precipitation for February, 1926

CLIMATOLOGICAL DATA

JUN 2 192

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXIV Parkersburg, W. Va., March, 1926 No. 3

GENERAL SUMMARY

March was exceptionally cold and generally cloudy, with the precipitation much deficient. The snowfall, however, was nearly twice the March average. It was the coldest March since 1891, except in 1915, when the State March average was 34.4°, while the month under consideration had an average of 35.9°. From the 2d to the 17th the temperature was continuously low, the longest cold period in any March of State record. While the precipitation was much below the normal, measureable amounts of rain or snow fell on an average of 13 days, and precipitation was recorded in some locality of the State on every day during the month. The rivers were at only moderate stages. Fruit buds were dormant at the close of the month, the outlook for fruit being excellent. While stock kept n good condition during the winter, feed was becoming scarce ıt the close of March.

TEMPERATURE

The monthly mean for the State, determined from the read- ugs of 50 stations, was 35.9°. The departure from the nornal for 42 stations having ten or more years of record was −6.8°. The month opened slightly warmer than usual, but ontinued cold weather prevailed from the 2d to the 17th, with he lowest temperatures for the month, ranging generally from ear zero to 12° above zero, occurring generally from the 3d to ıe 5th. The temperature was again much below the normal om the 26th to the 29th. The warmest weather for the month ccurred from the 18th to the 25th, the highest temperature eing noted on the 19th, 22d, and 24th.

PRECIPITATION

The average precipitation for the State, determined from the adings of 82 stations, was 2.87 inches. The departure from e normal for 48 stations having ten or more years of record ıs —0.94 inch. While the precipitation was quite favorably stributed, the monthly amounts were greatest over the northı mountain counties and least over the extreme eastern and stern counties. The greater part of the precipitation was eived on the 2-3d, 7-8th, 11-12th, 15-17th, 20th-21st, 22-d, and 26-27th, the greatest amounts being measured on the 7th, 23d, and 26th. Most of the snowfall was received on 2-3d, 7-8th, 11-13th, 15-17th, and 26-27th, the greatest ounts being measured on the 7-8th, 15-17th, and 26-27th. e greatest snowfall for the month, 60 inches, was measured Pickens, Randolph County.

MISCELLANEOUS PHENOMENA

ogs, dense: Arbovale, Bancroft, Huntington, and Marlinton, h; Bruceton Mills, Pickens, and Terra Alta, 20th; Terra a, 21st; Elkins and Marlinton, 22d; Terra Alta, 26th.

Hail: Aberdeen, Bens Run, Benson, Brownsville, Cairo, Fairmont, Horner, and Parkersburg, 18th; Creston, Grafton, Moundsville, New Martinsville, and Wheeling, 31st.

Halos, lunar: Bayard and Wheeling, 28th.

Halos, solar: Terra Alta, 17th; Bayard, 30th.

Sleet: Bayard, 2d; Elkins, Marlinton, Martinsburg, and Pickens, 7th; Crawford and Terra Alta, 18th; Brownsville, 27th; Terra Alta, Stony River Dam, and Upper Tract, 31st.

Thunderstorms (dates and number of stations reporting): 8th, 1; 18th, 17; 22d, 1; 23d, 3; 24th, 1; 31st, 7.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are use
determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries.
Reference letters, a, b, c appearing in the table indicate number of missing days; for example, b represents two days, etc.

Daily Precipitation for March, 1926

CHARLES F. MARVIN, Chief

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXIV Parkersburg, W. Va., April, 1926 No. 4

GENERAL SUMMARY

The past month, with an average temperature of 47.1°, was the coldest April of State record, except in 1907, when the average temperature was 45.6°. While the month was characterized by nearly continuously cold weather, the temperature being above the average on only six or seven days, three short periods, yet exceptionally low temperature for the season, generally the lowest of record, occurred on the 20th, when the morning readings ranged generally from about 16° to 20°, with a low temperature of 8° at Pickens, Randolph County. The rainfall was much below the normal but well distributed, although the snowfall averaged somewhat above the April amount, owing to cold weather during periods of precipitation. At the close of the month farm work, meadows and pastures were from two to three weeks late, and feed was scarce for stock; but conditions were generally favorable for fruit, bloom being kept back until into May, but some damage resulted to young trees from the cold weather on the 20th.

TEMPERATURE

The monthly mean for the State, determined from 47 stations, was 47.1°. The departure from the normal for 38 stations having ten or more years of records was —4.5°. The temperature was below the normal from the 1st to the 7th, 9th to the 13th, 15th to the 20th, and the 25th to the 30th, with the lowest readings occurring generally on the 1st, 16th, 19th and 20th, mostly on the 20th. The averages were somewhat above the normal on the 7th, 22d-24th, and 31st, the highest temperatures occurring generally on the 30th.

PRECIPITATION

The average precipitation for the State, determined from 82 stations, was 2.44 inches. The departure from the normal for 49 stations having ten or more years of record was —1.07 inches. The precipitation was heaviest over the central and northern mountain counties, and lightest over the eastern counties. Nearly all the precipitation fell on the 1st, 3d, 6-9th, 11-13th, 18-19th, 23d-25th, and 28th, the greatest amounts being measured on the 6th, 7th, 8th, and 18th. Snow flurries o light snow fell on the 1st and 15th. Moderate snow, gener-lly from 1 to 7 inches, fell in most sections on the 18th. Snow lurries were also noted on the 26th.

MISCELLANEOUS PHENOMENA

Aurora: Bayard and Piedmont, 14th.

Fogs, dense: Elkins, 24th; Grafton, 21st; New Cumberland, th.

Haze, light: Bayard, 16th, 17th, and 22d; Philippi, 28th.

Sleet: Bayard, Parkersburg, and Stony River Dam, 6th; Martinsburg, 7th; Kayford, 19th; Brownsville, 25th; Stony River Dam, 26th; Marlinton, 28th.

Thunderstorms (dates and number of stations reporting): 6th, 4; 7th, 2; 8th 10; 9th, 3; 11th, 2; 16th, 1; 18th, 1; 24th, 1; 25th, 1; 30th, 1.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, [a], [b], [c] appearing in the table indicate number of missing days: for example, [b] represents two days, etc.

Daily Precipitation for April, 1926

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU
CHARLES F. MARVIN, Chief

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXIV PARKERSBURG, W. VA., MAY, 1926 No. 5

GENERAL SUMMARY

May was exceptionally dry and somewhat cool. Unusually low temperatures were not recorded, but the temperature was below the normal for the greater part of the month, with the lowest readings on the 4th, 5th, 11th, 24th, and 28th, when light to heavy frosts occurred in many sections. On the morning of the 24th the temperature ranged generally from 35° to 42° with a low reading of 30° at Marlinton, and there was some frost damage. The State average rainfall was 2.50 inches, the least of May record, except in 1911 and 1914, when the averages were 1.46 and 1.96 inches, respectively. In sections of the extreme western counties and Mineral County the rainfall was the lightest of May record. The rainfall at Piedmont was .07 inch. Dry and cool weather retarded growth and farm work. Fruit condition was excellent at the close of the month. Hail, however, caused considerable local damage in Cabell County.

TEMPERATURE

The monthly mean for the State, determined from 48 stations, was 61.2°. The departure from the normal for 39 stations having ten or more years of record was —0.7°. The month opened somewhat warm and the temperature was also above the normal from the 6th to the 10th, 17th to the 20th, and on the 30th-31st, with the highest readings occurring generally on the 2d and 8th. The lowest temperatures were on the 4th, 5th, and 11th.

PRECIPITATION

The average rainfall, determined from 86 stations, was 2.50 inches. The departure from the normal for 51 stations having ten or more years of record was —1.51 inches. The rainfall was generally heaviest over the central and southern counties and lightest over the eastern panhandle. Most of the rainfall was received on the 3d, 10th, 14-16th, 18-19th, 22d, 24-27th, and 30th-31st, the greatest amounts being measured on the 14-15th and 30th. A trace of snow was noted on the 4th at Evenwood, Randolph County, and on the 24th at Stony River Dam, Grant County.

LIGHT HAIL

Light hail was observed in portions of the following counties: Fayette and Kanawha, 10th; Marion and Taylor, 18th; Barbour, 19th; Berkeley, 20th; Grant, Harrison, Lewis, Marion, Preston, and Upshur, 24th; Upshur, 27th.

HEAVY HAIL

From 5 to 6 p. m., May 24, moderately heavy hail fell from Ora to Milton, Cabell County. The storm moved from the west-northwest, about four miles, with width of path from one to two miles. The largest stones were about one-third of an inch in diameter. Fruit was destroyed in most sections of the storm's path, the greatest damage apparently being near Milton.

MISCELLANEOUS PHENOMENA

Fogs, dense: Bancroft, 13th and 20th; Grafton, 24th; Hinton, 26th; Mannington, 20th and 25th; Marlinton, 13th, 19th, 20th, 21st, 28th, and 30th; Pickens, 25th.

Halos, lunar: Moundsville, 19th; Parkersburg, 21st.

Halos, solar: Moundsville and Philippi, 28th.

Thunderstorms (dates and number of stations reporting): 1st, 3; 2d, 1; 4th, 1; 9th, 1; 10th, [illegible] 15th, 8; 16th, 1; 17th, 6; 18th, 15; 19th, 11; 20th, 5; 22d, 2; 24th, 11; 25th, 2; 26th, 3; 27th, 2; 30th, 5; 31st, 10.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used i determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

Daily Precipitation for May, 1926

HENRY C. HOWE, Meteorologist

VOL. XXXIV PARKERSBURG, W. VA., JUNE, 1926 No. 6

GENERAL SUMMARY

June was exceptionally cool and dry. The average temperature for the State, 65.9°, was slightly more than 3° below the normal and was the lowest of June State record, except in 1903, 1907, and 1916, when the June averages were 65.1°, 65.3° and 65.8°, respectively. The month was nearly continuously cool, the lowest temperatures observed comparing well with those of other Junes of record. The rainfall averaged nearly one inch below the normal and was well distributed throughout the month but unevenly distributed over the State, falling mostly during thunderstorms. Light hail fell in many localities on six or seven days, but destructive hail was not reported. All growth was late at the beginning of the month, especially meadows and pastures, which were much damaged by the dry weather during May. While the month was too cool for rapid growth, most crops were generally good at the close of the month, although nearly two weeks late. Small fruits were plentiful and the apple-crop outlook was generally good to excellent.

TEMPERATURE

The monthly mean for the State, determined from 50 stations, was 65.9°. The departure from the normal for 41 stations having ten or more years of record was —3.1°. The month opened slightly warmer than usual, but it was decidedly cooler from the 3d to the 8th, with the lowest temperatures of the month occurring generally on the 5th, 6th, and 7th. The temperature was also below the normal from the 9th to the 11th, 14th to the 16th, and the 19th until the 30th. The highest temperatures occurred generally on the 14th.

PRECIPITATION

The average precipitation for the State, determined from 87 stations, was 3.85 inches. The departure from the normal for 51 stations having ten or more years of record was —0.96 inch. Nearly all the rainfall was measured on the 1st-2d, 4-5th, 6-7th, 12-13th, 14-15th, 18th, 22-23d, and 25-26th, but there were scattered light showers on the 3d, 17th, 20th, and 30th. The rainfall was generally heaviest over the northern counties and lightest over the southeastern counties.

LIGHT HAIL

Light hail fell in sections of the counties named below, as follows: Braxton and Randolph, 6th; Harrison, Lewis, Monongalia, Mingo, Ohio, Randolph, and Wood, 7th; Marshall, 24th; Berkeley, 25th; Brooke, Hancock, and Preston, 26th.

MISCELLANEOUS PHENOMENA

Fogs dense: Bancroft, 10th, 11th, 28th, and 29th; Bayard, 28th; Beckley, 22d; Brandywine, 17th and 28th; Brownsville, 28th; Marlinton, 2d, 8th, 10th, 11th, 14th, 19th, 24th, 25th, 28th, and 30th; Morgantown, 6th; New Cumberland, 22d; St. Marys, 10th; Terra Alta, 6th; Wellsburg, 23d.

Frost, light: Davis, 28th.

Halos, solar: Moundsville, 3d; Terra Alta, 20th.

Thunderstorms (dates and number of stations reporting): 2d, 2; 3d, 1; 7th, 11; 12th, 18; 13th, 2; 14th, 11; 15th, 13; 16th, 1; 17th, 2; 18th, 4; 21st, 4; 22d, 6; 23d, 3; 24th, 6; 25th, 6; 26th, 6; 27th, 1; 30th, 3.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

Daily Precipitation for June, 1926

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXIV Parkersburg, W. Va., July, 1926 No. 7

GENERAL SUMMARY

Considering temperature and rainfall, the past month was nearly a typical July. The month, however, was characterized by heavy hail, high winds, and excessive rainfall in portions of the northern counties. The conditions were generally exceptionally favorable for growth, although the yields of wheat, oats and hay were generally below the normal, owing to the dry and cool weather during May and June. Corn on bottom lands was in good condition at the close of the month, and a good yield of potatoes was being secured. The fruit outlook was generally good.

TEMPERATURE

The monthly mean for the State, determined from 49 stations, was 72.6°. The departure from the normal for 39 stations having ten or more years of record was —0.2°. The temperature was somewhat above the normal until the 11th, generally much above from the 19th to the 24th, and slightly above during the last three days, with the highest readings on the 21st and 22d. Cool weather prevailed from the 11th to the 18th and the temperature was slightly below the normal from the 24th to the 28th, with the lowest readings on the 12th and 16th.

PRECIPITATION

The average precipitation for the State, determined from 82 stations, was 4.45 inches. The departure from the normal for 50 stations having ten or more years of record was +0.05 inch. The rainfall was heaviest over the west-central and central counties and lightest over the extreme northwestern counties. Most of the rainfall was received on the 3d-7th, 10-11th, 13-14th, 18-19th, 23d-24th, 27-28th, and 31st, the greatest amounts being measured on the 5-6th, 14th and 23d.

LIGHT HAIL

Light hail fell in sections of the following counties as given below: Lewis and Ranlolph. 10th: Monongalia, 18th; Grant, Lewis, Tucker, and Webster, 23d.

MODERATE HAIL

Moderate hail fell in the southeastern portion of Morgan County about 2 p.m. of the 3d. The storm apparently covered a territory about one and one-half miles in width r three or four miles, causing considerable damage to crops. During Saturday afteron. attending a heavy rain, moderately heavy hail fell in the Piedmont district of ineral County. Many of the stones were as large as walnuts. Some damage resulted crops.

HEAVY HAIL

On July 18, from 5;30 to 6 p.m., a destructive hail storm occurred in the northern rtion of Preston County. The storm moved from west to east for about three miles, ith width about three-fourths of a mile, and passed directly over Bruceton Mills, causing eat damage to crops, roofs and windows. The stones ranged in diameter from onelf an inch to three inches. In Bruceton Mills 800 window panes were broken, practilly all on the west side of buildings, composition roofs were destroyed, and metal ofs were damaged. Crops were destroyed in the path of the storm. Estimated loss out $200,000.

On July 23, about 3:30 p.m., a destructive hail strom formed about two miles northst of Romney, Hampshire County, and moved east-southeast about three miles, coverg a territory from one to two miles in width. The stones ranged in size from hickory ts to goose eggs. Estimated damage to crops, windows and roofs, $75,000.

HEAVY RAIN

Heavy to excessive rain was recorded as follows: Dam 19 O. R., 4th; Arbovale, rpers Ferry, Parsons and Ryan, 5th; Sutton and Vandalia, 6th; Parkersburg, 5th and h; Piedmont, 24th.

HIGH WIND

During the late afternoon of the 18th, attending a thunderstorm, unusually high wind prevailed in the Parkersburg district for about 15 minutes. Many fruit and shade trees were blown down or damaged, several awnings and signs were destroyed, and considerable damage resulted to telephone and telegraph wires. At Parkersburg at 4:53 p.m., the wind velocity, based on a five-minute interval, was 67 miles per hour, and on a one minute interval 80 miles per hour, the highest of record for the city. It was a straight blow from the northwest.

MISCELLANEOUS PHENOMENA

Frost, light: Bayard, 12th, 15th, and 16th; Davis, 12th and 16th.
Halos, lunar: Wheeling, 16th, 20th, and 21st.
Thunderstorms (dates and number of stations reporting): 1st, 1; 3d, 5; 4th, 10; 5th, 13; 6th, 19; 7th, 4; 9th, 3; 10th, 19; 11th, 3; 12th, 3; 13th, 5; 14th, 1; 17th, 2; 18th, 10; 19th, 3; 22d, 4; 23d, 18; 24th, 9; 25th, 2; 28th, 1; 29th, 2; 30th, 1; 31st, 10.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters, a, b, c appearing in the table indicate number of missing days; for example, b represents two days, etc.

Daily Precipitation for July, 1926

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXIV Parkersburg, W. Va., August, 1926 No. 8

GENERAL SUMMARY

The past month was exceptionally wet and considerably warmer than usual. The average rainfall, 6.94 inches, was the second greatest of August State record, the greatest August average rainfall, 7.51 inches, being noted in 1898. The average for August, 1911, was 6.71 inches. Rain fell daily in nearly all localities from the 13th to the 21st, when about 90 per cent. of the month's fall was received. The rainfall during that wet period ranged from 5 to more than 10 inches at many of the central and north-central stations. At Bayard, Grant County, 12.09 inches was measured from the 13th to the 23d. The average temperature 74°, was exceeded for August in 1900, 1906 and 1918. The month was generally unusually dry until the 13th, when crops and pastures were damaged by drought. During the rainy period crops were damaged by washings and grains in the shock began to sprout. The conditions were also unfavorable for threshing and all outdoor work. Pastures and meadows, however, were much improved by the soaking rains. There was practically no damage by hail.

TEMPERATURE

The monthly mean for the State, determined from 47 stations, was 74.0°. The departure from the normal for 37 stations having ten or more years of record was +2.1°. The temperature was above the normal from the 1st to the 7th, 10th to the 17th, 21st to the 24th, and from the 27th to the 29th, he highest temperature occurring in nearly all localities on the 11th, when the maximum temperature was near or slightly bove 100° at many stations. The coolest weather occurred on he 8-9th, 18-20th, 25-26th, and 31st, the lowest temperatures ccurring on the 9th and 31st.

PRECIPITATION

The average precipitation for the State, determined from 80 tations, was 6.94 inches. The departure from the normal for 5 stations having ten or more years of record was +3.00 inches. he rainfall was heaviest over the central and north-central coun- es and lightest over the southern counties. Scattered and gen- rally light showers occurred daily during the first week. From ie 13th to the 21st rain fell generally daily in practically all calities, heavy rain being measured in many localities. Mod- ate to heavy rain also fell on the 24-25th and light rain on the th. The heaviest rain was measured on the 15th, 16th and th.

LIGHT HAIL

Light hail fell at Camden-on-Gauley on the 15th, 18th and th.

MODERATE HAIL

Moderate hail fell locally at New Cumberland for 25 minutes the 21st. Not much damage was caused to crops and fruit.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 26th, 27th, and 29th; Bancroft, 4th, 5th 9th, 10th, 26th, 27th, and 29th; Bayard, 17th, 18th, and 20th; Elkins 9th, 26th, 28th, and 31st; Marlinton, 2d to the 13th, and from the 26th to the 30th; New Cumberland, 9th and 31st; Parkersburg, 26th and 28th; Stony River Dam, 19th; Terra Alta, 23d, 26th and 28th; Wellsburg, 31st.

Halos, lunar. Bayard, 11th and 15th.

Thunderstorms (dates and number of stations reporting): 1st, 1; 2d, 7; 3d, 9; 4th, 3; 5th, 4; 6th, 3; 7th, 1; 11th, 1; 12th, 3; 13th, 6; 14th, 15; 15th, 5; 16th, 9; 17th, 2; 18th, 1; 19th, 1; 20th, 3; 21st, 1; 22d, 1; 24th, 5; 25th, 1; 29th, 5; 30th, 8.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used i determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

Daily Precipitation for August, 1926

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

VOL. XXXIV PARKERSBURG, W. VA., SEPTEMBER, 1926 No. 9

GENERAL SUMMARY

September averaged warm and wet. The maximum temperatures, however, were well within previous September records, the month being characterized by nearly continuously warm weather. From the 14th to the 25th the temperature was continuously and considerably above the normal. Although the month was warm, the average temperature was more than 2° lower than for September, 1925. The average rainfall, 5.35 inches, was exceeded in only one September of State record. The average for September in 1925 was 5.96 inches. Over the northern portion of the State the rainfall generally ranged from near 6 inches to more than 10 inches, the greatest amounts, 10.07, 10.26 and 10.57 inches being measured at Wheeling, Pickins, and New Cumberland, respectively. The previous greatest September rainfall for any station was 9.18 inches. This record was broken by six stations during the month under consideration. Owing to the continued wet weather much grain was damaged or destroyed in the shock. Considerable corn was also damaged on low bottoms by marked rises in the smaller streams and rivers. Some loss also occurred along the Ohio River. The conditions were decidedly unfavorable for outdoor work. Meadows and pastures, however, were improved by the warm and wet weather.

TEMPERATURE

The monthly mean for the State, determined from 45 stations, was 68.6°. The departure from the normal for 34 stations having ten or more years of record was +3.0°. The temperature averaged near or slightly below the normal on the 1st, 7th and 10-13th, and considerably below from the 26th to the 30th, with the lowest readings occurring generally on the 11th, 26th and 27th. Warm weather prevailed from the 4th to the 6th and the 14th to the 25th, the highest temperatures being noted generally on the 4th and 5th.

PRECIPITATION

The average precipitation for the State, determined from 80 stations, was 5.35 inches. The departure from the normal for 48 stations having ten or more years of record was +2.41 inches. Showers occurred quite generally daily during the first week, being heavy in localities on the 2d and 5-6th. Scattered and generally light showers fell on the 9-10th and 15-16th, and moderately heavy showers on the 20th-21st. Showers occurred daily in most localities from the 23d to the close of the month, being heavy in the northern counties from the 21st to the 24th, inclusive.

LIGHT HAIL

Light hail occurred at Camden-onGauley on the 23d and 29th.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 7th, 12th, 15th, 17th, 20th, 21st. 23d, and 25; Bancroft, 8th, 11th, 12th, 17th, 18th, 20th, and 22d; Elkins, 1st, 8th, 11th, 12th, 17th, 18th, 20th, and 21st; Marlinton, 1st. 7th, 10th to the 13th, 16th to the 19th, and 24th and 28th; Morgantown, 17th and 18th; New Cumberland, 18th and 20th; Parkersburg, 17th, 18th, and 20th; Philippi, 16th; Terra Alta, 3d, 5th, 19th, and 20th; Wellsburg, 18th; Wheeling, 8th, 11th, 18th, 20th, 29th, and 30th.

Frost, light: Davis and Terra Alta, 11th.

Halos, lunar: Bayard, 12th, 13th, and 19th.

Thunderstorms (dates and number of stations reporting): 1st, 4; 2d, 9; 3d, 1; 4th, 5; 5th, 13; 6th, 12; 7th, 3; 9th, 5; 10th, 1; 15th, 2; 16th, 2; 18th, 1; 20th, 8; 21st, 12; 22d, 8; 23d, 16; 24th, 7; 25th, 15; 26th, 3; 29th, 1; 30th, 1.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters, a, b, c appearing in the table indicate number of missing days; for example, b represents two days, etc.

Daily Precipitation for September, 1926

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXIV Parkersburg, W. Va., October, 1926 No. 10

LIBRARY OF THE DEC 21 1926 UNIVERSITY OF ILLINOIS

GENERAL SUMMARY

The past month, with the precipitation nearly twice the normal, was the fourth consecutive wet month in West Virginia. Considering past records, the precipitation was greater for October in only two years, 1919 and 1925. The month was characterized by cloudy weather and frequent rains, no excessive daily rainfalls being noted. The snowfall averaged somewhat above the normal, the average October snowfall being greater in only four years of record. The first general snow occurred on the 25th. The average number of clear days was only ten, the least of October State record except in 1919, when the average was nine. While the greater part of the month was comparatively cold, the temperature averaged but slightly below the normal, the first week being warm. The first general killing frost in most of the agricultural districts occurred during the last decade, a week to ten days later than usual. Owing to frequent rains and cloudy weather much grain in the shock and rowen were damaged, and corn husking and apple picking were much delayed. An abundant crop of apples, however, was secured. Pastures were good until the close of the month.

TEMPERATURE

The monthly mean for the State, determined from 46 stations, was 54.9°. The departure from the normal for 38 stations having ten or more years of record was −0.3°. The temperature was above the normal from the 1st to the 6th, 10th to the 15th, and the 28th to the 31st, the highest temperature being general on the 4th and 5th. The temperature was deficient from the 7th to the 9th and the 15th to the 27th. The month also closed cold. The lowest temperatures occurred generally on the 26th and 28th.

PRECIPITATION

The average precipitation for the State, determined from 83 stations, was 4.79 inches. The departure from the normal for 49 stations having ten or more years of record was +1.72 inches. Most of the precipitation was recorded on the 2-3d, 5-6th, 11th, 13-14th, 16-17th, 19-20th, 24-25th, and 29th-31st, the greatest amounts being measured on the 2d, 6th, 13th, 20th, 24-25th, and 31st. Practically all of the snowfall was received on the 25th.

MISCELLANEOUS PHENOMENA

Aurora: Morgantown, 16th.

Fogs, dense: Arbovale, 3d, 4th, 12th, 16th, and 22d; Bancroft, th, 5th, 8th, 10th, 18th, 19th, 22d, 27th, and 28th; Browns- ille, 1st 4th, 8th, 9th, 12th, 15th, 16th, and 22d; Buckhan- on, 14th; Elkins, 3d, 4th, 13th, 15th, 16th, and 24th; Hunt- ngton; 1st, 8th, and 12th; Marlinton, 2d to the 5th, 9th, 12th, 4th to the 16th, and 30th; Morgantown, 12th; Parkersburg, th and 12th; Terra Alta, 12th, 14th, and 20th.

Hail, light: Brownsville, 6th; Elkins, 6th and 16th; Evenwood, 6th and 18th; Horner, 17th; Marlinton, 17th; Organ Cave, 6th, 17th, and 23d; Parsons, 16th.

Halos, solar: Moundsville, 23d and 30th.

Thunderstorms (dates and number of stations reporting): 1st, 1; 2d, 13; 3d, 3; 5th, 3; 6th, 1; 13th, 8; 16th, 9; 17th, 7; 18th, 3; 19th, 1; 20th, 7; 23d, 1; 24th, 1; 25th, 1.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used i determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for October, 1926

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

VOL. XXXIV PARKERSBURG, W. VA., NOVEMBER, 1926 No. 11

GENERAL SUMMARY

November averaged cold and wet, with much cloudiness. The month was characterized by long periods of moderately cold weather, the highest and lowest temperatures being well within November records. Moderately high temperatures prevailed on only two or three days. In most of the agricultural districts the first killing frost occurred during the first four days. The precipitation was unfavorably distributed over the State and throughout the month, nearly one-half of the monthly amounts being received on the 15-16th. This rain caused floods in the streams and smaller rivers Owing to cold and wet weather, late farm work was much delayed. Winter wheat was in fair condition at the close of the month.

TEMPERATURE

The monthly mean for the State, determined from 47 stations, was 40.7°. The departure from the normal for 36 stations having ten or more years of record was —2.0°. The temperature was below the normal from the 1st to the 6th, 10th to the 13th, the 19th to the 23d, and on the 27th, the lowest readings being general on the 12th. The warmest weather prevailed from the 13th to the 16th, the highest temperatures being general on the 15th. The temperature was slightly above the normal on the 8-9th, 25-26th, and the 28-29th.

PRECIPITATION

The average precipitation for the State, determined from 82 stations, was 3.59 inches. The departure from the normal for 52 stations having ten or more years of record was +0.84 inch. Most of the precipitation fell on the 9-10th, 15-16th, 18-19th, 26-27th and 31st, the greatest amounts being recorded on the 16th. Over the upper Little Kanawha and Elk basins the 24-hour amounts on that date ranged generally from 2 to more than 4 inches. Light rain also fell on the 1st, 4th, and 20th-21st. Snow flurries or light snow fell in many localities on the 10th, 19th-21st, and 27-28th.

RIVERS

Excessive rain over the upper portion of the Little Kanawha Basin caused a marked flood in the Little Kanawha River. The 24-hour rainfall at Glenville was 3.50 inches, and a fall of 4.10 nches was measured for a 24-hour amount at Sutton, in the ipper Elk Basin. The crest stage at Glenville was 33.6 feet, he highest of record. The previous record is 32 9 feet. The rest stage at Creston was 23.7 feet, or 3.7 feet above the floodne. In the Glenville district much furniture was damaged by ater and stacked hay along the river was swept away. The hio River was not above the flood stage, although a decided se occurred in that river.

MISCELLANEOUS PHENOMENA

Fogs, dense: Brownsville, 1st; Elkins, 25th; Glenville, 25th; Marlinton, 1st, 3d, and 25th; Point Pleasant, 1st; Terra Alta, 30th; Wheeling, 4th, 8th, 12th, 14th, 25th, and 28th.

Halos, lunar: Clarksburg, 17th; Wellsburg, 28th.

Halos, solar: Moundsville, 7th, 8th, and 13th.

Sleet: Bayard, 2d; Bens Run, 18th; Brownsville, 27th; Davis, 2d; Elkins, 4th and 18th; Philippi, 18th and 25th.

Thunderstorm: Lewisburg, 9th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used i determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters, [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

Daily Precipitation for November, 1926

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXIV Parkersburg, W. Va., December, 1926 No. 12

THE LIBRARY OF THE UNIVERSITY OF ILLINOIS

GENERAL SUMMARY

December was characterized by cloudiness and frequent rains or snows. As an average, there were only six clear days. The temperature averaged practically normal, a slight deficiency being noted at most of the northern stations, while the average for the southern stations was slightly above the normal. There was but one short cold period, the temperature for the greater part of the month being favorable for outdoor work. A temperature below zero was recorded at only eight stations, all in the northern and central counties. The precipitation was much above the normal and well distributed over the State and throughout the month. Rain or snow was quite general on twenty days and precipitation was recorded in some section of the State on every day in the month. The snowfall was generally unimportant, being the lightest of December State record, except in 1910, 1911, 1923, and 1924. Frequent rains interrupted farm work, the fields being too wet and soft for late fall hauling. Freezing and thawing weather, without snow-cover, was also unfavorable for winter grains and meadows.

TEMPERATURE

The monthly mean for the State, determined from 46 stations, was 33.9°. The departure from the normal for 38 stations having ten or more years of record was +0.3°. The month opened moderately cold, and the temperature was also considerably below the normal on the 6-7th. Low temperature was noted from the 14th to the 20th, the lowest readings of the month occurring on the 18th and 19th. The warmest weather was on the 13-14th, 20th-21st, and 23d-25th, the highest temperature being general on the 13th.

PRECIPITATION

The average precipitation for the State, determined from 79 stations, was 5.10 inches. The departure from the normal for 51 stations having ten or more years of record was +1.59 inches. Most of the precipitation was received on the 5-6th, 7-13th, 20th-22d, 24-26th, and the 28-29th, the greatest amounts being measured on the 5th, 10th, 13th, 20th-22d, and the 25-26th. Most of the snowfall was received on the 15th and 29th, but in many of the more northern or elevated locations light snow also fell on the 2d, 5th, 10th, 18th, 20th, 26th, and on the last three days.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 1st; Bayard, 28th; Bens Run, 22d and 24th; Bruceton Mills, 22d and 24th; Marlinton, 14th and 21st; Philippi, 19th; Romney, 5th; Terra Alta 4th, 5th, 8th, 9th, 23d, 24th, and 25th; Wheeling, 12th and 15th.

Halos, lunar: Parkersburg and Terra Alta, 19th.

Halo, solar: Terra Alta, 17th.

Sleet: Arbovale, 5th; Bayard, 5th, 6th, 9th, 11th, 23d, and 27th; Brownsville, 20th and 26th; Bruceton Mills, 5th and 20th; Horton, 5th; Marlinton, 5th, 20th, and 28th; Martinsburg, 5th, 6th, and 10th; Parkersburg, 10th; Rowlesburg, 5th; Stony River Dam, 23d and 24th; Terra Alta, 1st, 3d, and 5th; Wheeling, 5th, 9th, and 25th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or divisional means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for December, 1926

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXIV Parkersburg, W. Va., Year, 1926 No. 13

GENERAL SUMMARY

The year 1926 was somewhat colder and much wetter than usual. The snowfall was especially heavy.

January was moderately cold. February was moderately warm . An especially cool period, considered by months, prevailed from early in March until well into July. August and September were warm. The temperature for October was nearly normal. November was decidedly cool. The December temperature averaged near normal.

The January precipitation was slightly deficient. February was wet. The precipitation was much deficient for March, April, May, and June The July rainfall was practically normal. August, September, October, November, and December were wet months. The spring and early summer months were unfavorable for growth and farm work, owing to cool weather and lack of moisture. The late summer and fall months were too wet for harvesting and the curing of grains and hay. Much grain was lost by sprouting in the shock.

The season of growth extended from early in May to late in October, being somewhat longer than usual.

Cloudiness was considerably in excess. The sunshine at Parkersburg averaged 40 per cent. of the possible amount, or 6 per cent below the normal. The average at Elkins was 42 per cent., or 3 per cent. below the normal.

The wind movement at Parkersburg was 50,915 miles and at Elkins 49,598 miles.

THE WEATHER BY MONTHS

January.—January was characterized by moderately heavy snow and unusually low temperature during the last decade. Moderately heavy rain on the 21st-22d caused the snow to melt rapidly, giving decided rises in the smaller rivers and rather high stages in the Ohio River. The Little Kanawha River at Glenville reached a flood stage of 23.3 feet and the Ohio River at Point Pleasant reached a stage of 38.7 feet. Floating ice caused a suspension of boating on the Ohio River for several days.

February.—February was considerably warmer and wetter than usual. The temperature fell to zero at only six stations, and the precipitation averaged .87 inch above the normal. The snowfall was more than thrice the normal. Notwithstanding the heavy precipitation and warm weather, the rivers were only at moderate stages, owing to the high temperature periods being of short duration. The weather was mostly favorable for fruit and winter grains.

March.—March was exceptionally cold and generally cloudy, with the precipitation much deficient. The snowfall, however, was twice the March average. It was the coldest March of State record since 1891, except in 1915, and the longest cold period of State March record prevailed from the 2d to the 17th. Fruit buds were dormant at the close of the month, the outlook for fruit being excellent.

April.—This month, with a mean temperature of 47.1°, was the coldest April of State record, except in 1907, when the average was 45.6°. The weather was nearly continuously cold, the temperature being above the normal for only three short periods.

Reference letters indicate number of days missing: [a] one day, [b] two days, etc.

THE WEATHER BY MONTHS

Continued from page 49

he rainfall was much below the normal, but the snowfall averaged somewhat above the normal, owing to the cold weather. At the close of the month farm work, meadows nd pastures were from two to three weeks late. Fruit bloom was kept back until into ay.

May.—May was exceptionally dry and somewhat cool. The temperature was below e normal the greater part of the month. Frosts occurred in many sections on the 4th, h, 11th, 24th and 28th. The rainfall averaged only 2.50 inches. In sections of the xtreme western counties and Mineral County the rainfall was the lightest of May State ecord. Dry, cool weather retarded farm work. Fruit conditions were excellent. Hail aused considerable damage in Cabell County.

June.—June was also exceptionally cool and dry. The June State temperature verage was lower in only three years of record. The month was nearly continuously d. Light hail fell in many localities on six or seven days. Crops were nearly two eeks late at the close of the month. Small fruits were plentiful and the outlook was nerally good for fruit.

July.—Considering temperature and rainfall, July was a typical month. The onth was characterized by heavy hail, high winds and excessive rainfall in portions the northern counties. On July 18 a destructive hail storm occurred in the northern rtion of Preston County, and on July 23 a destructive hail storm formed about two les northwest of Romney. The damage from hail in the two storms was estimated $275,000.

August.—August was considerably wetter and warmer than usual. The average rainfall, 6.94 inches, was the greatest of August record, except in 1898, when the State average was 7.51 inches. Rain fell daily in nearly all localities from the 13th to the 21st. Crops were damaged by the heavy rains and grains in the shock began to sprout. The conditions were droughty until the 13th.

September.—September was warm and wet. From the 14th to the 25th the temperature was continuously and considerably above the normal. For the State, there was only one wetter September. Corn was much damaged in the shock and much corn was washed away or damaged on low bottoms by high water in the rivers and smaller streams. Meadows and pastures were improved by the wet weather.

October.—The October precipitation was nearly twice the normal, making the fourth consecutive wet month. The first general snow fell on the 25th. The first killing frost occurred during the last decade, a week or ten days later than usual. Owing to frequent rains much grain was damaged in the shock. An abundant crop of apples was secured. Pastures were good until the close of the month.

November.—November was characterized by long periods of moderately cold weather. In most of the agricultural districts the first killing frost occurred during the first four days. The precipitation was unfavorably distributed over the State and throughout the month, nearly one-half of the monthly amounts being received on the 15-16th. Farm work was much delayed.

December.—There were frequent rains and snows during December. As an average, there were but six clear days during the month. There was but one cold period, and a temperature below zero was recorded at but eight stations. The snowfall was unimportant. Freezing and thawing weather without snow-cover was unfavorable for winter grains.

Monthly and Annual Precipitation for the Year 1926, with Departures from Normal

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

VOL. XXXV PARKERSBURG, W. VA., JANUARY, 1927 No. 1

GENERAL SUMMARY

January averaged slightly warmer than usual but the precipitation was practically normal. The month was generally cloudy. There were three well-marked periods of moderately cold weather and four periods that were moderately warm. The precipitation was well distributed throughout the month, but the distribution over the State was somewhat unfavorable. There was practically no snow-cover in the agricultural districts, the conditions being rather unfavorable for winter grains.

RIVERS

The greatest flood since 1913 passed through this district from January 22 to January 28, caused by moderately heavy rains and melted snows over the upper portions of the Ohio Valley. The following crest stages, in feet and tenths, were noted: Wheeling, 41.7; Saint Marys, 41.7; Marietta, 44.0; Dam 18, 44.6; Parkersburg, 45.5; Dam 19, 46.4; Dam 20, 46.7; Dam 22 (Ravenswood), 50.1; Point Pleasant, 50.0.

TEMPERATURE

The monthly mean for the State, determined from 51 stations, was 32.5°. The departure from the normal for 43 stations having ten or more years of record was +0.4°. The month opened cold and the temperature was also below the normal from the 6th to the 12th, 14th to the 17th, and the 25th to the 27th, the coldest weather occurring on the morning of the 16th. The temperature was considerably above the normal from the 18th to the 23d and the 28th to the 31st, the highest readings being noted on the 21st and 22d.

PRECIPITATION

The average precipitation for the State, determined from 86 stations, was 4.08 inches. The departure from the normal for 59 stations having ten or more years of record was +0.03 inch. Most of the precipitation was measured on the 3d-5th, 9-11th, 14-15th, 18-24th, and 28-29th, the greatest amounts being noted on the 14th and 19th-23d. Light to moderate snow fell on the 1st, 3d, 5th, 9-10th. The precipitation was heaviest over the northern and central counties and lightest over the eastern counties. Over the southern counties the precipitation was also light.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 18th and 21st; Bens Run, 20th and 21st; Bruceton Mills 14th; Elkins, 20th; Marlinton, 20th, 21st, 22d, and 25th; Parkersburg, 25th; Pickens, 24th.

Halos, lunar: Elkins, 13th and 17th; Parkersburg, 12th and 17th; Philippi, 17th; Piedmont, 12th; Ryan, 18th

Halo, solar: Elkins, 16th.

Sleet: Arbovale, 18th; Bayard, 4th and 14th; Bens Run, 18th; Brownsville, 18th; Davis, 23d and 24th; Glenville, 18th; Marlinton, 14th, 18th, and 29th; Martinsburg, 4th, 14th, and 19th; Philippi, 14th; Piedmont, 14th; Ryan, 18th.

Thunderstorm: Bens Run, 22d.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters, [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

Daily Precipitation for January, 1927

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXV Parkersburg, W. Va., February, 1927 No. 2

GENERAL SUMMARY

The past month, with an average temperature of 40.9°, was the warmest February of State record, or since 1890. The lowest temperature recorded was 6°. In every other February of record, except in 1897, a temperature of zero or below was noted. In 1897 the lowest temperature recorded at any atation in February was 3°. The previous warmest February of State record was in 1909, when the average temperature was 40.4°. The precipitation also averaged considerably more than 1 inch above the normal, but was well distributed, the weather for the month being characterized by frequent and general rains or snows. Although the month was exceptionally warm, the snowfall averaged nearly 2 inches above the normal, owing to an unusually heavy fall on the 19-20th. Wheat continued in fair condition during the month, but the soil was generally too wet for field work.

TEMPERATURE

The monthly mean for the State, determined from 49 sta- ions, was 40.9°. The departure from the normal for 40 sta- ions having ten or more years of record was +8.5°. Excepting he 11th, the month was continuously warm until the 19th, he highest temperatures being noted on the 16th and 17th. It vas also moderately warm from the 23d to the 25th. The lowest temperatures occurred generally on the 11th and 22d.

PRECIPITATION

The average precipitation for the State, determined from 81 tations, was 4.49 inches. The departure from the normal for 1 stations having ten or more years of record was +1.29 inches. he precipitation was heaviest over the central and north-central ounties and lightest over the southern and extreme eastern. lost of the precipitation was received on the 5-6th, 10-11th, 3-14th, 17th-21st, 23d, and 25-27th, the greatest amounts eing measured on the 6th, 14th, 18-20th, and 23d. Most of ie snowfall was received on the 19-20th, but light to moderate iow also fell on the 10th, 26th, 27th, and 28th.

HAIL

Light hail fell in sections of the following counties on dates erewith: Brooke, Gilmer, Harrison, and Randolph, 16th; arbour, 18th; Lewis, 19th and 24th; Gilmer, Ohio, and Wood, th; Berkeley, 26th.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 23d and 25th; Bancroft, 23d and 24th; ns Run, 24th; Bruceton Mills, 23d; Davis, 10th; Elkins, h, 9th, 10th, 24th, and 25th; Fairmont, 8th, 10th, 22d, and d; Huntington, 23d; Lost Creek, 19th; Marlinton, 9th, 10th, d, 24th and 25th; Organ Cave, 5th and 6th; Parkersburg, d and 24th; Philippi, 23d and 24th; Pickens, 18th; Terra Alta, 18th, 23d, and 24th; Wellsburg, 8th and 9th; Williamson, 4th.

Halos, lunar: Parkersburg, 12th; Philippi, 12th and 14th; Ryan, 13th; Terra Alta, 13th.

Sleet: Martinsburg, 6th; Bens Run, 13th; Beckley, Bens Run, Cairo, Parkersburg, Point Pleasant, Terra Alta, and Valley Chapel, 18th; Beckley, Crawford, Elkins, Glenville, Marlinton, Martinsburg, Moorefield, Parsons, Philippi, Pickens, Roanoke, and Valley Chapel, 19th; Crawford, Elkins, Marlinton, Martinsburg, 20th; Marlinton, 24th; Parsons, 25th.

Thunderstorms (dates and number of stations reporting): 3d, 5; 6th, 2; 14th, 1; 16th, 20; 17th, 10; 18th, 23; 22d, 1; 23d, 1; 24th, 7; 25th, 10; 26th, 2.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters, [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

Daily Precipitation for February, 1927

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION.

HENRY C. HOWE, Meteorologist

Vol. XXXV   Parkersburg, W. Va., March, 1927   No. 3

GENERAL SUMMARY

The past month was decidedly warmer than usual, being in marked contrast to March, 1926. One of the longest and warmest periods of March State record prevailed from near the close of the first decade into the last decade, causing a rapid advancement of vegetation and fruit buds. Moderately cold weather during the last decade checked bud development and growth, the outlook for fruit being favorable at the close of the month. It was the dryest March since 1915, although the precipitation was quite favorably distributed and generally sufficient for all needs. The rivers were at low or moderate stages. Plowing advanced rapidly during the month, the soil being generally free from excessive moisture.

TEMPERATURE

The monthly mean for the State, determined from 48 stations, was 45.4°. The departure from the normal for 41 stations having ten or more years of record was +2.4°. The month opened cold and the temperature continued below the normal until the 9th. The weather was especially warm from the 9th until the 22d. From the 11th to the 20th the daily average was nearly 18° above the normal. From the 22d to the 31st the weather was favorably cold, the temperature averaging about 5° below the normal.

PRECIPITATION

The average precipitation for the State, determined from 82 stations, was 2.66 inches. The departure from the normal for 57 stations having ten or more years of record was —1.24 inches. The precipitation was heaviest over the central and northern counties and lightest over the extreme eastern counties. The greater part of precipitation was received on the 6-8th, 14th, 8th-21st, 26-27th, and 31st, the greatest amounts being measured on the 14th, 20th, and 21st. Snow fell on the 1st-2d, 21st-2d, and 27-28th, the heaviest falls in most regions being measured on the 2d.

HAIL

Light to heavy hail fell in sections of the following counties n dates given: Berkeley, Gilmer, Lewis, Monongalia, and ocahontas, 19th. Preston. 8th and 26th.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 20th; Bancroft, 7th, 15th, 20th, 24th, nd 28th; Brownsville, 16th, 20th, and 25th; Cairo, 25th; harleston, 15th and 25th; Elkins, 16th and 20th; Fairmont, th, 16th, and 20th; Glenville, 16th and 25th; Huntington, 15th; Marlinton, 11th, 16th, 17th, and 20th; Morgantown, 16th; Parkersburg, 7th.

Halos, lunar: Clarksburg, 14th; Parkersburg, 11th and 13th; Pickens, 12th; Terra Alta, 13th and 14th.

Sleet: Marlinton, 6th; Stony River Dam, 27th.

Thunderstorms (dates and number of stations reporting): 8th, 1; 17th, 1; 18th, 7; 19th, 18; 20th, 11; 26th, 3.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are use determining section or division means.

† Also on other dates.

†† Received too late to be included in means and summaries

Reference letters, a, b, c appearing in the table indicate number of missing days; for example, b represents two days, etc.

Daily Precipitation for March, 1927

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXV   Parkersburg, W. Va., April, 1927   No. 4

GENERAL SUMMARY

The past month, with an average precipitation of 5.93 inches, was the wettest April of State record, except in 1901, when the April average was 7.05 inches. Moderate rain was more or less general on twenty days, the daily amounts being excessive in only a few localities. Flood stages were not noted in the larger streams and rivers. The temperature averaged practically normal, but unusually low temperature and killing frosts occurred during the last decade, following high temperatures near the close of the second decade. Owing to nearly continuous rains, the soil was too wet for farm operations and farm work was late at the close of the month. Killing frosts and freezing temperatures on the mornings of the 23d, 24th, and 25th caused great damage to peach and apple bloom. The damage to stone fruits was especially severe.

HIGH WIND

On the 29th a high wind in Pocahontas County in and near Marlinton caused considerable damage. Roofs were blown off several houses and many trees were blown down. It was a straight blow from the west.

TEMPERATURE

The monthly mean for the State, determined from 50 stations, was 52.0°. The departure from the normal for 42 stations having ten or more years of record was +0.3°. The temperature was considerably above the normal on the 1st, and from the 4th to the 6th and the 15th to the 21st, the highest readings being noted on the 18-19th, ranging generally from 80° to 89°. Moderately cold weather prevailed from the 7th to the 11th, and decidedly cold weather for the time of year from the 22d to the 26th.

PRECIPITATION

The average precipitation for the State, determined from 85 stations, was 5.93 inches. The departure from the normal for 57 stations having ten or more years of record was +2.27 inches. The heaviest precipitation was received over the central and southern counties, and the lightest over the northern counties. Most of the precipitation was measured from the 1st to the 6th, and on the 8-9th, 13th, 16-17th, 26-27th, and 29-30th, the greatest amounts being noted on the 1st, 9th, 21st-22d, and 29-30th. Light snow fell in many sections on the 2-3d, 8th, and 22-23d.

LIGHT HAIL

Light hail fell in sections of the following counties on dates indicated: Hancock, 1st; Greenbrier, 2d; Brooke, 5th and 20th; Pocahontas, 19th and 27th; Logan, 20th; McDowell and Monongalia, 21st; Grant, Harrison and Pleasants, 22d; Randolph, 27th; Braxton, 29th; Roane, 30th.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 17th; Bancroft, 6th, 17th, and 28th; Brandywine, 2d and 30th; Fairmont, 6th; Hinton, 20th; Morgantown, 6th; Parkersburg, 17th; Terra Alta, 3d.

Frost, killing: Killing frost occurred generally throughout the state on the mornings of the 23d, 24th, and 25th.

Sleet: Arbovale, 9th; Cortland, 3d, 9th, and 21st; Horton, 9th and 27th; Lost Creek, 22d; Stony River Dam, 1st; Terra Alta, 9th; Wheeling, 6th.

Thunderstorms (dates and number of stations reporting): 1st, 7; 2d, 2; 4th, 1; 5th, 1; 8th, 1; 16th, 3; 19th, 9; 20th, 3; 21st, 8; 22d, 2; 27th, 11; 29th, 15; 30th, 11.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for April, 1927

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXV Parkersburg, W. Va., May, 1927 No. 5

GENERAL SUMMARY

While the temperature and rainfall averaged practically normal, the month was characterized by a long period of unfavorably cool weather and by too much rain over large portions of the State. The average number of rainy days, 15, was much above the normal, although for May in 1908 and 1924 the average was 17. Freezing temperature at the beginning of the month caused great damage to fruit, especially in valley orchards. In the eastern commercial orchards the damage was not considered great. Continued rains and cool weather near the close of the month greatly retarded growth and farm work. Wheat, however, was in good condition at the close of the month, and meadows and pastures were generally good to excellent. Practically no damage from hail was reported.

TEMPERATURE

The monthly mean for the State, determined from 49 stations, was 62.0°. The departure from the normal for 41 stations having ten or more years of record was −0.3°. The month opened with freezing temperature in many sections Cool weather also prevailed from the 12th to the 17th and during the last week. Unusually warm weather for May prevailed from the 6th to the 14th and the 24th to the 26th. The highest temperatures occurred generally on the 9th and 21st and the lowest on the 1st and 2d.

PRECIPITATION

The average precipitation for the State, determined from 83 stations, was 4.13 inches. The departure from the normal for 56 stations having ten or more years of record was +0.04 inch. While rain fell in some section of the State on nearly every day of the month, the greater part of the precipitation was received on the 4th, 8th, from the 10th to the 19th, the 23d to the 25th, and on the 29-30th. The greatest amounts were measured on the 14-15th, 23d, and 30th. Traces of snow fell at Horton and Stony River Dam. The precipitation was heaviest over the entral and north central counties and lightest over the eastern anhandle counties.

HAIL

Light: Light hail fell in sections of the following counties on ates indicated: Kanawha, 8th; Grant, Preston, and Wood, th; Berkeley, 11th; Kanawha and Roane, 14th; Lewis, 15th; ocahontas, 22d; Braxton, Gilmer, Grant, Harrison, Lewis, onongalia, Mingo, Randolph, Ritchie, Upshur, Wirt, and ood, 26th; Preston, 31st.

Moderately heavy hail: Moderately heavy hail fell in sections of Berkeley nty on the 10th. Stones as large as a hen's egg fell at Marlowe and Falling Waters. ndow glass was broken in a few houses. Moderately heavy hail also fell at Terra ta. Preston County, on the 26th. Practically no damage to crops occurred during se storms.

HIGH WIND

A high wind, causing some damage to roofs and shade trees, prevailed in sections Berkeley County during a severe thunderstorm.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 23d Bancroft, 5th and 9th; Brownsville, 2d and 9th, Charleston, 5th; Elkins, 1st, Marlinton, 3d, 5th, and 22d.

Halos, solar: Hinton and Ryan, 27th.

Frost: Heavy to killing frost occurred generally throughout the State on the mornings of the 1st and 2d, and light to heavy frost in the mountain sections on the 28th

Thunderstorms (dates and number of stations reporting) 3d, 1; 4th, 3, 9th, 1; 10th, 14; 11th, 1; 14th, 8; 15th, 5; 16th, 1; 18th, 9; 19th, 2, 21st, 2, 22d, 7, 24th, 1; 25th, 1; 26th, 11; 28th, 1; 29th, 1; 30th, 7; 31st, 4.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries.
Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for May, 1927

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXV PARKERSBURG, W. VA., JUNE, 1927 No. 6

GENERAL SUMMARY

With the exception of June in 1903 and 1907, the past month, with an average temperature of 65.7°, was the coolest June of State record. In 1903 the average temperature for June was 65.1°, and in 1907, 65.3. Until the 28th the month was nearly continuously cool, the temperature being only slightly above the normal for five or six days for that period. Light to heavy frosts also occurred in some of the mountain districts on the 2d, 6th, 16th, and 27th, with the temperature below the freezing point at Bayard, Davis, Pickens, and Terra Alta. These conditions were exceptionally unfavorable for plant growth. High temperature on the last two days caused a rapid advancement of crop growth. The precipitation was somewhat below the normal in nearly all localities, but was well distributed throughout the month and over the State. There was practically no damage from hail or high winds. At the close of the month corn was short, pastures were good, potatoes were making good growth, and a fair to good crop of wheat was being secured.

TEMPERATURE

The monthly mean for the State, determined from 47 stations, was 65.7°. The departure from the normal for 40 stations having ten or more years of record was —3.6°. The month opened cool and the temperature was also considerably below the normal from the 5th to the 8th, 13th to the 22d, and the 26th to the 28th, with the lowest readings occurring generally on the 6th. The 29th and 30th were warm days, with temperatures ranging generally from 90° to 95°.

PRECIPITATION

The average precipitation for the State, determined from 83 tations, was 4.08 inches. The departure from the normal for 7 stations having ten or more years of record was —0.33 inch. he rainfall was heaviest over the north-central counties and ightest over the southern and northwestern counties. The reater part of the rainfall was measured on the 3d-5th, 12-14th, 8-19th, 22-23d, and the 26th, the greatest 24-hour amounts eing noted on the 4th, 14th, and 18-19th.

HAIL

Light hail occurred in sections of the following counties on ates indicated: Grant, 5th; Harrison, 4th; Ohio, 4th and 5th; Preston, 4th, 12th, 23d, and 26th.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 2d, 8th, and 12th; Bancroft, 6th, 8th, h, and 20th:- Charleston, 20th; Elkins, 1st, 8th, and 9th; lenville, 2d; Mannington, 1st, 2d, 6th, 9th. 15th, 25th, 28th, d 30th; Marlinton, 1st, 4th, 9th 11th, 16th, 20th, 25th, and om the 27th to the 30th, inclusive; Philippi, 20th; Pickens, th; Wellsburg, 15th.

Halos, lunar: Bayard, 10th, 17th, and 22d; Parkersburg, 9th.

Halos, solar: Bayard, 6th, 23d, and 25th.

Frost: Light to heavy frost occurred generally in the mountain sections on the 2d, 6th, 16th, and 27th.

Thunderstorms (dates and number of stations reporting): 4th, 9; 12th, 14; 13th, 2; 14th, 4; 19th, 2; 20th, 2; 22d, 2; 23d, 8; 25th, 4; 26th, 9; 27th, 1.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters, [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

Daily Precipitation for June, 1927

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

VOL. XXXV PARKERSBURG, W. VA., JULY, 1927 No. 7

GENERAL SUMMARY

July averaged slightly cooler and somewhat wetter than usual. The highest and lowest temperatures, however, were well within previous July records. The nights were generally cool. Most of the precipitation occurred during thunderstorms, the rainfall being unevenly distributed over the State. Heavy to excessive rains occurred in many localities of the central and northern counties on the 7th and 22d, causing considerable damage to crops on creek bottoms. The greatest 24-hour amount noted, 4.30 inches, was at Sutton on the 22d. At Elkins 3.50 inches fell on the 7th. There was practically no damage from hail. During the warm periods of the month crops made rapid growth, but corn was backward and short at the close of the month. A good crop of wheat was secured under generally favorable conditions. The hay crop was large, but somewhat weedy. Potatoes made good growth.

TEMPERATURE

The monthly mean for the State, determined from 50 stations, was 72.3°. The departure from the normal for 41 stations having ten or more years of record was -0.5°. The month opened warm and the temperature was considerably above the average from the 12th to the 17th and the 28th to the 30th. Cool weather prevailed from the 3d to the 11th and the 22d to the 27th, with the lowest temperatures occurring generally on the 5th. The warmest weather occurred generally on the 1st and 13th.

PRECIPITATION

The average precipitation for the State, determined from 85 stations, was 5.09 inches. The departure from the normal for 56 stations having ten or more years of record was +0.42 inch. The rainfall was heaviest over the central and northern counties and lightest over the eastern and extreme southern counties. Most of the rainfall was received on the 2-3d, 7-8th, 14-17th, 22-23d, and 29th-31st, the greatest 24-hour amounts being measured on the 7th, 16th, 22d, and 31st. There were scattered and generally light showers on the 10th, 11th, 19th, 20th, and 28th.

HAIL

Light hail fell in sections of the following counties on dates given: Grant, 21st; Greenbrier, 8th; Upshur, 7th. Moderate ail fell in sections of Tucker County on the 6th, and in sections f Braxton County on the 22d.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 2d, 12th, 18th, 19th, 25th, and 27th; ancroft, 1st, 5th, 12th, 13th, 19th, 20th, 21st, 26th, 27th, nd 28th; Elkins, 1st and 26th; Fairmont, 1st.

Halo, solar: Bayard, 18th.

Frost, light: Bayard, 5th and 6th; Horton, 4th and 5th.

Thunderstorms (dates and number of stations reporting): 1st, 6; 2d, 3; 6th, 2; 7th, [illegible], 1; 10th, 3; 11th, 5; 13th, 2; 14th, 14; 15th, 14; 16th, 4; 17th, 8; 18th, 3; 20th, 5; 21st, 9; 22d, 17; 23d, 6; 27th, 1; 29th, 7; 30th, 9; 31st, 6.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for July, 1927

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXV Parkersburg, W. Va., August, 1927 No. 8

GENERAL SUMMARY

The past month, with an average temperature of 67.1°, was not only the coolest August of State record, but had an average 1.8° below the exceptionally cool August in 1922. The month was characterized by nearly continuously cool weather. The nights were especially cool, and the highest temperature recorded at any station, 94°, was exceeded in every other August of State record, except in 1907. Light frosts were noted in sections of the northern mountain counties on the 10th, 16th, 20th, 25th, and 26th; but no damage resulted. The rainfall was somewhat above the August average and was unevenly distributed over the State. While there were several heavy showers, there was practically no damage from severe storms. No hail storms were noted. The month was exceptionally unfavorable for growth and farm work. Corn made but little progress and was generally in poor to fair condition at the close of the month. A large yield of potatoes was secured.

TEMPERATURE

The monthly mean for the State, determined from 48 stations, was 67.1°. The departure from the normal for 39 stations having ten or more years of record was —4.9°. The month opened with the temperature practically normal, and the averages for the 7-8th, 13th, and 23d were slightly above the normal. The other portions of the month were cool, with the lowest readings generally on the 25-26th. Low temperatures also prevailed on the 16th, 17th, 28th, and 29th.

PRECIPITATION

The average precipitation for the State, determined from 82 stations, was 4.33 inches. The departure from the normal for 55 stations having ten or more years of record was +0.22 inch. The rainfall was heaviest over the central and northern mountain counties and generally lightest over the extreme eastern and northwestern counties. The greater part of the rainfall was received from the 1st to the 3d, and on the 8-9th, 14-15th, 18-20th, and the 29th, the greatest amounts being measured on the 1st, 8th, and 14th.

MISCELLANEOUS PHENOMENA

Aurora: Elkins 6th.

Fogs, dense: Arbovale, 19th, 24th, and 30th; Bancroft, 5th, 10th, 12th, 16th, 22d, 23d, 25th, 28th 29th, and 31st; Bayard, 2d, 3d, 10th, 25th, and 26th; Elkins, 10th, 12th, 16th, 21st, 22d, 23d, 25th, 28th, and 31st; Fairmont, 12th, 13th, 16th, 22d, and 31st; Glenville, 9th; Marlinton, 5th, 10th, 12th, 13th, 16th, 23d, 24th, 30th, and 31st; New Cumberland, 10th, 16th, 17th, 24th, and 31st; Parkersburg, 12th, 21st, 23d, 29th, and 31st; Piedmont 18th; Terra Alta, 3d, 6th, 9th, 12th, 13th, 18th, 19th, 22d, 24th, and 28th; Wellsburg, 12th.

Frost, light: Bayard, 10th, 16th, 20th, and 26th; Davis, 25th; Terra Alta, 25th.

Halo, solar: Bayard, 28th.

Thunderstorms (dates and number of stations reporting): 1st, 10; 2d, 4; 6th, 1; 7th, 1; 8th, 5; 9th, 1; 14th, 2; 15th, 1; 19th, 2; 20th, 4; 21st, 1; 28th, 2; 29th, 2; 30th, 1.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries. Reference letters ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for August, 1927

Vol. XXXV Parkersburg, W. Va., September, 1927 No. 9

THE LIBRARY OF THE
NOV 7 1927
UNIVERSITY OF ILLINOIS

GENERAL SUMMARY

September was a pleasant month. As an average, there were but four cloudy days. While the temperature averaged but slightly more than 1.5° above the normal, the temperature was continuously above the normal from the 6th to the 19th. The last few days were also warm. Cool but fair weather prevailed from the 19th to the 25th, with light to heavy frosts on the mornings of the 21st, 22d, and 23d Heavy to dense fogs prevailed during the morning hours of the cool period, and there was but slight frost damage. The average temperature, 67.0°, was but 0 1° lower than for August, the preceding month. The rainfall was considerably below the normal and was mostly received before the 20th. The conditions were exceptionally favorable for the ripening of corn, which was exceptionally backward. Many fields were not fully matured at the close of the month Late plowing, however, was much retarded from lack of moisture in the soil.

TEMPERATURE

The monthly mean for the State, determined from 49 stations, was 67.0°. The departure from the normal for 39 stations having ten or more years of record was +1.3°. The month opened with the temperature near the normal, but slightly warmer weather set in on the 6th and continued until the 13th, when considerably warmer weather set in and continued until the 19th. It was cool from the 19th to the 25th, with light to heavy frosts on three or four mornings in most localities. The month closed moderately warm.

PRECIPITATION

The average precipitation for the State, determined from 85 stations, was 2.15 inches. The departure from the normal for 56 stations having ten or more years of record was —0.94 inch. Showers fell daily from the 8th to the 11th and on the 13-14th, 16th, 18-19th, and 29th, most of the rainfall being measured on the 5th, 11th, and 19th. The rainfall was heaviest over the central and north-central counties and lightest over the eastern and central-western counties.

MISCELLANEOUS PHENOMENA

Fogs, dense (dates and number of stations reporting): 1st, 10; 2d, 10; 3d, 7; 4th, 4; 5th, 5; 6th, 5; 7th, 10; 8th, 2; 9th, 4; 10th, 3; 12th, 12; 13th, 4; 14th, 3; 15th, 9; 16th, 6; 17th, 9; 18th, 4; 20th, 6; 21st, 3; 22d, 11; 23d, 7; 24th, 10; 25th, 8; 26th, 3; 27th, 5; 28th, 4; 29th, 3.

Halo, lunar: Bayard, 7th.

Thunderstorms (dates and number of stations reporting): 7th, 1; 8th, 6; 9th, 5; 10th, 6; 11th, 3; 13th, 4; 14th, 6; 16th, 2; [illegible]th, 4; 19th, 1.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section or division means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

Daily Precipitation for September, 1927

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXV PARKERSBURG, W. VA., OCTOBER, 1927 No. 10

THE LIBRARY OF THE DEC 8 1927 UNIVERSITY OF ILLINOIS

GENERAL SUMMARY

Like the preceding month, the weather for October was exceptionally pleasant and favorable for the ripening of corn and other late crops. At the close of August the prospect for a good corn crop was exceptionally unfavorable, but at the close of October corn was completely matured that crop was generally large. While freezing temperature and killing frost occurred in most regions on the 15th, the corn crop was not damaged. The highest temperature of October State record occurred at most stations at the beginning of the month. From the 20th to the clos of month the weather was sunshiny and averaged the warmest of October State record for the last decade in October, being the most delightful weather of the year. The season of fall growth was about ten days longer than usual. The average temperature for the month, 57°, was 2 1° above the average. The average rainfall, 4 13 inches, was 1.03 inches above the normal. The snowfall was normal and confined mostly to the highest altitudes of the State. The greatest monthly amount, 12.0 inches, was measured at Stony River Dam.

TEMPERATURE

The monthly mean for the State, determined from 51 stations, was 57.0°. The departure from the normal for 42 stations having ten or more years of record was +2.1°. The month opened exceptionally warm and the temperature continued above the normal until the 8th The last decade was also exceptionally warm for that period of the year. Moderately cold weather prevailed from the 13th to the 20th, with killing frosts in most sections of the State on the 15th, when the lowest temperatures of the month were noted. The highest temperatures occurred on the 1st and 2d.

PRECIPITATION

The average precipitation for the State, determined from 85 stations, was 4.13 inches. The departure from the normal for 58 stations having ten or more years of record was +1.03 inches. Rain was general on the 3d-4th, 7-8th, 12-13th, and from the 17th to the 20th, the greatest amounts being measured on the 3d-4th. 12-13th, and 18-19th. The rainfall was heaviest over the extreme eastern counties and lightest over the southern counties. Most of the snow fell from the 18th to the 20th. The greatest falls were as follows: Stony River Dam, 12.0 inches; Cortland, 7.5 inches; Davis, 6.5 inches; Pickens, 4.0 inches; Bayard, 2.0 inches.

MISCELLANEOUS PHENOMENA

Fogs, dense (dates and number of stations reporting): 1st, 3; 2d, 5; 5th, 14; 6th, 11; 7th, 1; 9th, 3; 10th, 10; 11th, 12; 12th, 1; 13th, 2; 15th, 12; 16th, 8; 20th, 2; 21st, 6; 22d, 4; 24th, 22; 25th, 12; 26th, 17; 27th, 15; 28th, 16; 29th 1; 30th, 8; 31st, 2.

Halo, solar: Bayard, 11th.

Haze light: Bayard, 1st, 2d, 24th, and 28th; Bens Run 29th and 30th; Terra Alta, 10th, 26th, and 29th.

Sleet: Smithfield, 12th.

Thunderstorms: Mannington, 31st; Parkersburg, 12th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

† Also on other dates. †† Received too late to be included in means and summaries

Reference letters ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for October, 1927

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXV Parkersburg, W. Va., November, 1927 No. 11

GENERAL SUMMARY

November was exceptionally cloudy, warm and wet. The average temperature, 48.1°, was exceeded in only two Novembers of State record, in 1902 and 1909, when the temperature averages were 50.3° and 49.1°, respectively. The average rainfall, 4.35 inches, was exceeded in only five Novembers of State record, 1897, 1900, 1913, 1919, and 1921. For some of the stations in the central and western counties the rainfall was the greatest of November State record. The last decade was exceptionally pleasant. The conditions were generally favorable for outdoor work. Corn husking was well advanced at the close of the month and winter wheat was in good condition. Moderately high winds prevailed on the 30th.

TEMPERATURE

The monthly mean for the State, determined from 50 stations, was 48.1°. The departure from the normal for 41 stations having ten or more years of record was +5.3. The temperature was much above the normal on the 1st-2d, 11-12th, 14-16th, and from the 22d to the close of the month, with the highest readings occurring on the 1st, 2d, 15th, and 29th. From the 3d to the 10th and the 18th to the 21st the temperature was considerably below the normal, with the lowest readings generally on the 7th and 20th.

PRECIPITATION

The average precipitation for the State, determined from 83 stations, was 4.35 inches. The departure from the normal for 57 stations having ten or more years of record was +1.73 inches. The precipitation was greatest over the central and western counties and lightest over the eastern panhandle counties. The greater part of the precipitation was received on the 2d-5th, 8-9th, 16-18th, and from the 23d to the 28th, the greatest amounts being measured on the 17th. Light to moderate snow fell in many localities on the 4th, 5th, 6th, and the 18th and 19th. At most of the southern stations only traces of snow were noted, but in the highest locations of the State the monthly amounts ranged generally from 5 to 10 inches.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 10th; Bancroft, 11th and 26th; Brownsville, 26th; Clay, 11th, 12th, 22d, 24th, and 25th; Davis, 9th; Elkins, 9th, 10th, 13th, and 26th; Hinton, 11th and 24th; Mannington, 10th and 26th; Marlinton, 1st, 10th, 11th, and 30th; Morgantown, 13th; Pt. Pleasant, 10th; Ravenswood, 10th; Terra Alta, 9th, 10th, and 17th, Wheeling, 20th and 26th.

Hail: Marlinton, 17th.

Halos, lunar: Bayard, 15th and 17th; Morgantown, 9th.

Halo, solar: Bayard, 2d.

Sleet: Arbovale, 8th; Bayard, 8th; Brownsville, 5th; Lost Creek, 5th and 19th; Marlinton, 9th.

Thunderstorms: Davis, 1st; Martinsburg, 18th; New Cumberland, 1st; Rowlesburg, 30th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for November, 1927

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXV Parkersburg, W. Va., December, 1927 No. 12

GENERAL SUMMARY

The temperature for December averaged practically normal, but the precipitation was somewhat above the normal. The highest and lowest temperatures observed were also well within previous records. While the precipitation was above the normal and while a flood occurred in the Ohio River, the precipitation was hardly excessive in any locality of the State. The snowfall was only slightly more than one-half the December average. The temperature for the month was characterized by a warm period that prevailed from the 11th to the 16th and a cold period from the 18th to the 28th. Corn husking was more or less general during the month, but most farm work was practically at a standstill.

TEMPERATURE

The monthly mean for the State, determined from 48 stations, was 34.4°. The departure from the normal for 41 stations having ten or more years of record was +0.8°. Moderately cool weather prevailed from the 2d to the 5th, and the 8th to the 10th. Low temperature was general from the 17th to the 28th. The temperature was high for the season from the 11th to the 16th. The lowest temperatures were noted generally on the 9th, 19th and 26th. The highest occurred generally on the 1st and 13th. A cold wave set in at the close of the month.

PRECIPITATION

The average precipitation for the State, determined from 84 stations, was 3.72 inches. The departure from the normal for 58 stations having ten or more years of record was +0.34 inch. The greater part of the precipitation was recorded from the 1st to the 3d, 11th to the 17th, and the 29th to the 31st. Light precipitation also occurred on the 7-8th and 19th-21st. The greatest daily amounts fell from the 11th to the 14th. The greater part of the snowfall was received on the 8-9th and from the 16th to the 20th.

RIVERS

Owing to heavy rains in sections of Pennsylvania and Ohio, a moderate flood occurred in the Ohio River in this section from near the close of the second decade to well into the third decade of December. While there was not much damage in the cities and larger places along the river, there was the usual worry and work brought about by moving goods to higher places. Farmers, however, lost much hay and corn fodder and considerable corn. The following crest stages were noted: Wheeling, 40.9; Saint Marys, 38.7; Marietta, 40.7; Parkersburg, 41.9; Dam 19, 42.7; Dam 20, 43.0; Dam 22, 46.1; Dam 25, 46.9; Point Pleasant, 45.3; Huntington (Dam 28), 47.0 feet.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 30th; Clay, 13th; Elkins, 26th; Hinon, 6th, 13th, and 30th; Marlinton, 12th and 31st; St. Marys, 30th and 31st; Terra Alta, 21st; Wheeling, 6th, 7th, 10th, 26th, 27th, 28th, and 30th; Williamson, 6th.

Halos, lunar: Elkins, 1st and 30th; Parkersburg, 1st.

THE LIBRARY OF THE
DEC 8 1928
UNIVERSITY OF ILLINOIS

Sleet: Arbovale, 2d and 4th; Bancroft, 21st and 22d; Bayard, 4th and 21st; Brandywine, 4th; Brownsville, 21st; Clay, 21st; Cortland, 22d, 23d, and 24th; Crawford, 22d; Davis, 5th, and 21st; Elkins, 4th and 31st; Fairmont, 21st; Horton, 3d and 22d; Kayford, 4th; Marlinton, 4th and 22d; Martinsburg, 5th; Moorefield, 4th; Morgantown, 21st; Organ Cave, 2d and 17th; Pickens, 4th; Roanoke, 21st; Ryan, 20th and 21st; Stony River Dam, 2d and 23d; Terra Alta, 1st, 4th, and 21st; Williamson, 20th.

Thunderstorms: Bruceton Mills, 14th; Elkins and Parsons, 31st.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXV PARKERSBURG, W. VA., YEAR, 1927 No. 13

GENERAL SUMMARY

The year 1927 averaged considerably warmer and wetter than usual. The snowfall was much below the normal. The first four and last four months averaged warmer than usual, February and November being exceptionally warm as compared with the State normals for those months. The summer months, or May, June, July, and August averaged cool, being the coolest August of State record.

The precipitation averaged above the normal monthly, except ch, June, and September, the greatest precipitation occur- in April. The precipitation was lightest in March. About -half of the yearly snowfall was received in February.

me and August were decidedly unfavorable for growth, but rm fall fully matured late crops.

The season of growth extended from about April 25 to about October 15 and was somewhat longer than usual.

Cloudiness was in excess. The sunshine at Parkersburg averaged 44 per cent. of the possible amount, or 3 per cent below the normal. The average at Elkins was 42 per cent., or 3 per cent. below the normal.

The wind movement for Parkersburg was 49,713 miles, and at Elkins 46,680.

THE WEATHER BY MONTHS

JANUARY.—The temperature and precipitation for January were practically normal, but the snowfall was somewhat below the normal and there was practically no snow-cover in the agricultural districts, the conditions being rather unfavorable for winter grains. The greatest flood since 1913 passed through the district from the 22d to the 28th. The following crest stages, in feet and tenths, were noted: Wheeling, 41.7; Marietta, 44.0; Parkersburg, 45.5; Point Pleasant, 50.0.

FEBRUARY.—February was exceptionally warm. The lowest temperature recorded was 6°. The precipitation was more than 1 inch above the normal. Unusually heavy snow fell on the 19-20th. The soil was too wet for field work.

MARCH.—March was decidedly warmer than usual, and one of the longest warm periods of March State record prevailed from near the close of the first decade into the last decade, causing a rapid advancement of vegetation and fruit buds. Moderately

* 1 day interpolated from nearby stations

† And other dates

[Continued from page [illegible]]

cold weather prevailed during the last decade. It was the dryest March since 1915. Farm work progressed rapidly.

APRIL. With the exception of April in 1901, the past month was the wettest of April State record. Moderate rain was more or less general on twenty days. The soil was too wet for field operations. Killing frosts and freezing temperature on the mornings of the [illegible], 28th, and 29th caused great damage to fruit and apple bloom. The damage to stone fruits was especially severe.

MAY. May was characterized by a long period of unfavorably cool weather and by too much rain over large portions of the State. Freezing temperature at the beginning of the month caused great damage to fruit, especially in valley orchards. Rains and cool weather greatly retarded farm work. Meadows and pastures, however, were generally good to excellent.

JUNE. June was exceptionally cool. Until the 28th the month was nearly continuously cool, the temperature being only slightly above the normal for five or six days in that period. Light to heavy frosts occurred in some of the mountain regions, and freezing temperature was noted at Bayard, Davis, Pickens and Terra Alta. High temperature prevailed during the last two days. The precipitation was somewhat below the normal.

JULY. July was slightly cooler and somewhat wetter than usual. Heavy to excessive rain occurred in many localities of the central and northern counties on the 7th and 22d, causing much damage to crops on creek bottoms. Good yields of wheat and hay were secured under favorable conditions.

AUGUST. With a mean temperature of 67.1°, August in 1927 was not only the coolest August of State record but had a temperature average 1.8° below the cool August in 1922. Light frosts were noted in sections of the northern mountain counties on the 10th, 16th, 20th, 25th, and 26th, but no damage resulted. The month was exceptionally unfavorable for growth and farm work.

SEPTEMBER. September was a pleasant month with the temperature somewhat above the normal and the rainfall considerably below. Light to heavy frosts occurred on the mornings of the 21st, 22d, and 23d, but heavy fogs [illegible] kept the frosts from doing much damage. The conditions were exceptionally favorable for the ripening of corn.

OCTOBER. October was also exceptionally pleasant and favorable for the ripening of corn and other late crops. While freezing temperature and killing frosts occurred in most sections on the 14th, the corn crop was not damaged. The rainfall averaged more than one inch above the normal.

NOVEMBER. November was exceptionally cloudy, warm and wet. At some stations in the central and western counties the rainfall was the heaviest of November State record. The last decade was especially pleasant.

DECEMBER. The temperature and precipitation for December were near the normal. Heavy rains in Pennsylvania and Ohio caused a moderate flood in the Ohio River. The following crest stages, in feet and tenths, were noted: Wheeling, [illegible]; Marietta, [illegible]; Parkersburg, 41.9; Dam 19, 42.7; Dam 20, 43.0; Dam 22, 46.1; Dam [illegible], [illegible]; Point Pleasant, [illegible]; Huntington, 47.0. Much hay, corn fodder, and corn were lost from the fields along the river.

ERRATA

The following data should be substituted for those published:

February, 1927, report.—Page 6: Organ Cave, greatest 24-hour precipitation, [illegible]. Williamson, character of weather, 11 clear, 1 partly cloudy and 16 cloudy.

March, 1927, report.—Page 10: Jane Lew, lowest temperature, 12° on 5th.

May, 1927, report.—Page 18: Terra Alta, total precipitation, 6.21 inches. Glenville, character of weather, clear 10 days, cloudy 6 days. Page 19: Terra Alta, precipitation on 15th, .65. Total precipitation for Terra Alta, 6.21 inches.

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU
CHARLES F. MARVIN, Chief

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXVI Parkersburg, W. Va., January, 1928 No. 1

GENERAL SUMMARY

The average precipitation for January, 2.18 inches, was the lightest of January State record since 1898. The State averages for 1896 and 1897 were 1.57 and 1.70 inches, respectively. Although light, the precipitation of January, 1928, was well distributed over the State and apparently sufficient for all purposes. The rivers were low. The temperature averaged normal, the month being nearly equally divided into periods of moderately warm and moderately cold weather. The average snowfall, 4.0 inches, was less than one-half the normal. The conditions were generally favorable for outdoor work. There was considerable winter plowing. While there was practically no snow-cover in the agricultural districts, the temperature was not low enough to seriously damage winter grains.

TEMPERATURE

The monthly mean for the State, determined from 46 stations, was 32.0°. The departure from the normal for 38 stations having ten or more years of record was —0.1°. The month opened cold, with the lowest temperature occurring generally on the 2d, 3d, and 4th. The temperature was also low from the 20th to the 22d, and from the 26th to the close of the month, with the lowest readings occurring at a few stations on the 29th. The temperature was continuously above the normal from the 6th to the 20th, with the highest readings occurring generally on the 14th,

PRECIPITATION

The average precipitation for the State, determined from 84 stations, was 2.18 inches. The departure from the normal for 56 stations having ten or more years of record was —1.75 inches. Most of the precipitation was received on the 8-9th, 17-20th, 24-25th, and 28th, the greatest amounts being measured on the 19th and 25th. Light snow fell in many localities on the 1st-2d, 20th-21st, 25-26th, 28-29th, and 31st, being moderately heavy at a few stations on those dates. The heaviest snow was on the 25-26th and 28th. The greatest monthly amounts were s follows: Bayard, 25.0; Pickens, 24.0; Cortland, 21.0; Davis, 6.9; Stony River Dam, 14.0; Horton, 13.8 inches.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 19th; Brownsville, 8th and 19th; Clay, th, 10th, 18th, and 19th; Davis, 16th; Gary, 9th; Glenville, th and 9th; Parkersburg, 12th; Pt. Pleasant, 12th; Spencer, 1st; St. Marys, 9th and 10th; Terra Alta, 9th and 17th.

Hail: Brownsville, Elkins, Morgantown, Parkersburg, Pt. leasant, Roanoke, and Wheeling, 19th.

Halos, lunar: Clarksburg and Parkersburg, 5th.

Thunderstorms: Lewisburg, 24th; Mannington, 19th; Morgantown, 22d; Organ Cave, 19th; Wheeling, 19th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters, [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

Daily Precipitation for January, 1928

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXVI Parkersburg, W. Va., February, 1928 No. 2

GENERAL SUMMARY

February was considerably warmer and drier than usual, with an excess of cloudiness. The lowest temperature was 3° below zero, and the temperature fell to zero at only three stations—Bayard, Pickens and Terra Alta. The precipitation was favorably distributed over the State and throughout the month, excessive precipitation not being noted in any section. The rivers were generally at low stages. During the first of the month boating was impeded by floating ice. The snowfall was about two-thirds of the normal, and the ground was bare in the agricultural districts practically the entire month. Work on the land was practically at a standstill. The condition of wheat was reported as fair to good.

TEMPERATURE

The monthly mean for the State, determined from 47 stations, was 34.6°. The departure from the normal for 38 stations having ten or more years of record was +2.3°. The month opened cold, but much warmer weather set in on the 3d and the temperature continued above the normal until the 18th. Moderately low temperature prevailed from the 18th to the 22d and from the 23d to the 27th, the lowest temperature of the month occurring generally on the 2d, 19th, and 21st. The highest temperature was noted on the 4th and 8th.

PRECIPITATION

The average precipitation for the State, determined from 84 stations, was 2.50 inches. The departure from the normal for 56 stations having ten or more years of record was —0.54 inch. The precipitation was heaviest over the northwest counties and the northern mountain regions, and was lightest over the extreme eastern counties. The greater part of the precipitation was received on the 5th, 7-9th, 14-15th, 18-19th, and the 23d-24th, the greatest amounts being measured on the 5th, 14th, and 23d. Most of the snowfall occurred on the 10-11th and 18-19th, but in the more elevated districts there was light to moderate snow on the 1st, 9th, 15- 17th, 20th, 22-26th, and 29th.

MISCELLANEOUS PHENOMENA

Fogs, dense: Bayard, 5th; Clay, 8th and 17th; Crawford, 5th; Davis, 5th; Glenville, 8th; Pickens, 11th, 15th, and 16th; Terra Alta, 5th, 11th, 15th, and 16th; Wheeling, 13th and 28th.

Sleet: Davis, 17th; Martinsburg, 16th; Marlinton, 14th; Roanoke, 8th; Rowlesburg, 7th.

Halos, solar: Parkersburg, 22d and 28th.

Thunderstorms: Bayard, 9th and 10th; Martinsburg, 9th; Parkersburg, 23d; Pt. Pleasant, 23d; Weston, 14th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

† Also on other dates. †† Received too late to be included in means and summaries

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for February, 1928

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXVI Parkersburg, W. Va., March, 1928 No. 3

GENERAL SUMMARY

March was somewhat colder than usual, with the precipitation practically normal. Cold weather prevailed the greater part of the month, but the temperature fell to zero or below at only one station. The precipitation was well distributed. The average snowfall, 16.3 inches, was the heaviest of March State record, except in 1914, when the March average was 17.7 inches. Most of the snow for March, 1928, was received late on the 17th and during the night of the 17-18th, when the falls averaged near 10 inches, being the heaviest snowfall for several years. Melting snow during the last decade and moderately heavy rain on the 30th caused a moderate rise in the Ohio River. March conditions were favorable for fruit, buds being dormant at the close of the month. The conditions were unfavorable for wheat, the ground being bare during the cold periods of the month.

TEMPERATURE

The monthly mean for the State, determined from 44 stations, was 41.4°. The departure from the normal for 36 stations having ten or more years of record was —1.7°. With the exception of a day or two the weather was cold until the 11th. Cold weather also prevailed from the 16th to the 22d and on the 27-28th and 30th-31st, with the lowest temperature occurring generally on the 4th and 6th. The warmest weather prevailed from the 11th to the 14th and the 22d to the 27th, with the highest temperatures being general on the 13th, 26th, and 29th.

PRECIPITATION

The average precipitation for the State, determined from 83 stations, was 3.87 inches. The departure from the normal for 54 stations having ten or more years of record was +0.01 inch. The precipitation was heaviest in the western and central counties and lightest in the extreme eastern and southeastern counties. The greater part of the precipitation was received on the 1st, 9th, 14th, 16-18th, 26-27th, and 30th, the greatest amounts being measured on the 18th and 30th. Most of the snowfall occurred on the 17-18th, when the fall was especially heavy; but light to moderate snow also fell in many localities on the 1st, 3d, 19th, 20th, 27th, and 30th.

HAIL

On the 30th light hail fell in sections of Gilmer, Harrison, Lewis, Mason, Tucker, Upshur, and Wood counties.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 12th and 26th; Bancroft, 23d and 24th; Clay, 23d; Hinton, 26th; Parkersburg, 23d; Saint Marys, 23d; Stony River Dam, 10th, 16th, and 17th; Wardensville, 13th; Wheeling, 23d.

Sleet: Wheeling, 4th; Stony River Dam, 10th; Bayard, Cortland, Creston, Parkersburg, and Roanoke, 16th; Wheeling, 22d.

Thunderstorms (dates and number of stations reporting): 13th, 3; 19th, 1; 21st, 1; 22d, 4; 23d, 2; 25th, 4; 26th, 15; 27th, 13; 29th, 11; 30th, 21.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXVI Parkersburg, W. Va., April, 1928 No. 4

GENERAL SUMMARY

April was decidedly cool and wet, and the average snowfall, 11.4 inches, was the heaviest of April State record. The April temperature was lower in only five years of past record, or in 1898, 1901, 1904, 1907, and 1926. The precipitation was also greater in only five years of past record. The precipitation, however, was well distributed over the State and throughout the month. On the 27-28th heavy snow fell in nearly all portions of the State, except the extreme western portion. Over all the central and north-central counties and the eastern panhandle region the fall for the storm averaged nearly 18 inches, and the fall at Bayard was 35 inches, at Pickens, 30 inches, and at Davis, 29.8 inches. This storm caused some damage to fruit trees in the eastern counties, many branches being broken down. Much damage was also caused to telephone service, many poles and wires being broken down by the heavy snow. Melting snow at the close of the month caused flood stages in the Monongahela and Potomac basins. The month was unfavorable for growth and farm work. Peach bloom was killed in localities by the low temperature near the middle of the month.

TEMPERATURE

The monthly mean for the State, determined from 48 stations, was 48.6°. The departure from the normal for 38 stations having ten or more years of record was —3.2°. The month opened with temperature near normal, but from the 3d to the 6th the temperature averaged nearly 20° above the normal, rapidly advancing growth. This was the only warm period of the month, although the temperature was slightly above the normal on the 18-19th and 21st-22d. The coolest weather prevailed from the 8th to the 11th, 15th to the 17th, and from the 26th to the 28th, with lowest readings being general on the 16th. The highest temperature was general on the 5th.

PRECIPITATION

The average precipitation for the State, determined from 86 stations, was 5.08 inches. The departure from the normal for 56 stations having ten or more years of record was +1.38 inches. The precipitation was heaviest over the central, north-central, and eastern counties, and lightest over the southeastern counties. The greater part of the precipitation was received on the 1st-2d, 7-8th, 11-12th, 14th, 21st-24th, and the 27-28th, the greatest amounts being measured on the 12th, 22d, and 27-28th. Light snow fell in the more elevated localities on the 1st, 12th, and 17th, and heavy snow in nearly all localities on the 27-28th.

HAIL

Light hail was noted at Mannington on the 14th.

MISCELLANEOUS PHENOMENA

Fogs, dense: Bancroft, 2d, 5th, and 26th; Clay, 12th; Elkins, 18th; Hinton, 13th; Wheeling, 2d.

Halos, lunar: Parkersburg, 30th; Pickens, 20th.

Halo, solar: Ryan, 13th.

Sleet: Davis, Horton, Union and Upper Tract, 11th.

Thunderstorms (dates and number of stations reporting): 1st, 1; 2d, 1; 7th, 3; 8th, 2; 21st, 1; 22d, 1; 23d, 1.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

† Also on other dates. †† Received too late to be included in means and summaries

Reference letters [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

Daily Precipitation for April, 1928

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU
CHARLES F. MARVIN, Chief

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXVI   Parkersburg, W. Va., May, 1928   No. 5

GENERAL SUMMARY

May was cool and dry. The temperature was below the normal for about twenty days. While the temperature averaged considerably below the normal, the May averages were lower in seven years of past record. Freezing temperature and light to heavy frosts occurred in many sections until the middle of the month, the lowest temperature for the month being general on the 13th. The precipitation was much below the normal, most of which was received during the last half of the month. Over the extreme eastern counties the rainfall averaged only about one-third of the normal. As the season was exceptionally backward, there was not much frost damage; but low temperature and cloudy and showery weather caused an exceptionally heavy fruit-drop near the close of the month. However, growth was much retarded by cool weather. The highest temperature recorded in the State during the last eight days was 79°. At the close of the month wheat was generally poor and corn small, with poor color. Pastures and meadows were fair, and potatoes generally good.

TEMPERATURE

The monthly mean for the State, determined from 46 stations, was 58.9°. The departure from the normal for 38 stations having ten or more years of record was —3.0°. The temperature was above the normal on the 3d-5th, 10-11th, and from the 16th to the 22d, the highest readings occurring at nearly all stations on the 4th. Decidedly cool weather prevailed from the 6th to the 9th, 12th to the 14th, and from the 23d to the end of the month, the lowest temperatures occurring at most stations on the 13th.

PRECIPITATION

The average precipitation for the State, determined from 87 stations, was 2.61 inches. The departure from the normal for 57 stations having ten or more years of record was —1.49 inches. Most of the precipitation was received on the 11-12th and from the 17th to the 20th and the 25th to the 28th and on the 30th-31st. There were light showers on the 4-5th and scattered showers on the 22-23d. A light flurry of snow was observed at Bruceton Mills and Martinsburg on the 12th.

HAIL

Light hail fell in sections of the following counties on dates given: Berkeley, 6th; Monroe, 10th; Greenbrier and Randolph, 22d; Ohio and Wood, 18th and 20th; Pleasants and Preston, 26th; Pocahontas, 27th; Braxton, 30th.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 28th and 30th; Bancroft, 3d and 4th; Clay, 21st; Elkins, 6th; Fairmont, 6th and 21st; Grafton, 24th and 25th; Mannington, 6th, 21st, and 31st; Marlinton, 23d, 28th, and 30th; Parkersburg, 21st.

Halo, lunar: Parkersburg, 4th.

Thunderstorms (dates and number of stations reporting): 17th, 11; 18th, 8; 19th, 14; 20th, 2; 21st, 1; 22d, 4; 25th, 1; 26th, 4; 27th, 5; 30th, 8; 31st, 2.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters. ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for May, 1928

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

VOL. XXXVI PARKERSBURG, W. VA., JUNE, 1928 No. 6

AUG 16 1928

GENERAL SUMMARY

The past month, with an average precipitation of 7.37 inches, was not only the wettest June of State record but was the fourth wettest month of State record. The averages for July in 1896 and 1912 were 9.07 and 7.48 inches, respectively, and the average for August in 1898 was 7.51 inches. While the month was exceptionally cool, the temperature averaged 1° higher than for June, 1927. Excessive rains caused much damage by washing and flooding in many sections of the State. Heavy rain on June 25 over the northern portion of Morgan County caused much damage to Berkeley Springs Park. Warm Spring Run swept over its retaining wall damaging rustic bridges and leaving a thick deposit of mud in the bath houses and over the park. Heavy rain over the southern counties on the 28-29th caused floods in all creeks and smaller rivers, causing much damage. As recorded, the 48-hour rainfall ranged generally from 2 inches to nearly 6 inches. The storm caused two deaths in Logan County, a boy 16 years old and a colored infant. Great floods occurred in Twelve Pole Creek and its tributariss in Wayne County. Twenty-five houses were totally destroyed, many others damaged, and nearly 300 people were made homeless. Owing to quite general showers on 20 days, farm work was much delayed, and cool weather much retarded growth.

TEMPERATURE

The monthly mean for the State, determined from 47 stations, was 66.7°. The departure from the normal for 38 stations having ten or more years of record was —2.6°. The month opened cool and the temperature was also considerably below the normal on the 3d and from the 6th to the 12th, 14th to the 16th, and from the 24th to the close of the month. The temperature was above the normal on only five or six days, with the highest readings occurring generally on the 13th. The temperature was lowest on the 1st.

PRECIPITATION

The average precipitation for the State, determined from 85 stations, was 7.37 inches. The departure from the normal for 58 stations having ten or more years of record was +2.76 inches. Precipitation was recorded daily for the State, but the amounts were light and scattered on the 1st, 3d, 11th, 16th, 17th, and 28th. The greatest amounts were recorded on the 18-19th, 24-25th, and the 28-29th.

LIGHT HAIL

Light hail was noted in sections of Mingo and Pleasants Counties on the 17th and in Lewis County on the 29th.

MODERATE HAIL

Moderate hail fell at and in the vicinity of Berkeley Springs, Morgan County, on the 25th.

HEAVY HAIL

Heavy hail fell in sections of Bath and Sleepy Creek districts of Morgan County on June 27, causing great damage to fruit and crops. The storm moved northward from the southern portion of Bath district to the Potomac River, covering a territory from one to two miles in width. The stones were about the size of walnuts. The storm was most severe near Ridersville, where bushels of hail stones were shoveled up after the storm.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 8th, 11th, 26th, and 28th; Bayard, 7th; Clarksburg, 15th; Elkins, 1st, 11th, 13th, 15th, and 28th; Fairmont, 15th; Grafton, 7th; Marlinton, 1st, 8th, 15th, 16th, and 28th; Terra Alta, 3d and 28th.

Frost, light: Arbovale, Bayard, Marlinton, Pickens, and Terra Alta, 1st.

Thunderstorms (dates and number of stations reporting): 2d, 2; 5th, 1; 6th, 1; 8th, 1; 9th, 9; 10th, 1; 11th, 1; 12th, 1; 13th, 5; 17th, 6; 18th, 9; 19th, 19; 20th, 12; 21st, 7; 22d, 1; 23d, 8; 24th, 8; 25th, 4; 26th, 3; 27th, 3; 28th, 2; 29th, 5; 30th, 6.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for June, 1928

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXVI Parkersburg, W. Va., July, 1928 No. 7

GENERAL SUMMARY

July averaged somewhat warmer and drier than usual. While the highest and lowest temperatures were well within previous July records, the month was characterized by long periods with the average temperature near the normal or somewhat above and by a cool period at the close of the month. The rainfall was rather unfavorably distributed, occurring mostly during thunderstorms. The 24 hour amounts exceeded two inches at only five stations and the greatest 24 hour amount recorded was 3.04 inches, at Mannington. The conditions were excellent for rapid growth, and all crops were much improved and generally in good condition at the close of the month; but wet weather greatly retarded cultivation and crops were weedy most of the month.

TEMPERATURE

The monthly mean for the State, determined from 47 stations, was 73.5°. The departure from the normal for 39 stations having ten or more years of record was +0.4°. The temperature was generally somewhat above the normal from the 3d to the 5th, 8th to the 12th, and the 19th to the 23d, with the highest readings occurring generally on the 8th, 19th, and 26th. Moderately cool weather prevailed from the 14th to the 17th, and the temperature was considerably below the normal from the 28th to the close of the month, with the lowest readings ccurring generally on the 30th.

PRECIPITATION

The average precipitation for the State, determined from 87 tations, was 4.23 inches. The departure from the normal for 57 stations having ten or more years of record was — 0.10 nch. The precipitation was generally much the heaviest over the northwestern counties, and was lightest over the southern and extreme eastern counties. Showers occurred in most ocalities on the 4-5th, 9-10th, 12-14th, 20th-23d, and the 27-28th, the greatest amounts being measured on the 10th, 13-14th, and 21st.

LIGHT HAIL

Light hail was noted in sections of Lewis and Ohio counties n the 4th and in Brooke County on the 11th.

MODERATE HAIL

Moderate hail fell in sections of the eastern portion of Berkeley ounty on the 12th. The heaviest hail was noted from Martinsburg to Hedgesville. Practically no damage resulted.

AURORA

A brilliant aurora was observed in the northern part of the tate from 8:20 p. m. to 11:45 p. m. on the 7th, the display eing at the maximum from 10 to 11 p. m. The observer at erra Alta, Mr. J. J. Shanahan, describes the aurora as follows: "Occasional broad beams of luminous white to pale red light xtending from the horizon to the zenith from the east through ne northern sky to the west." The Observer at Piedmont, Ir. C. A. Suter, Jr., reported that the beams of light were red, hite and blue-green in cirrus cloud effects, and that the apex f the display at maximum was 15° southwest of star Vega. le also stated that the radio was dead. The aurora was oserved as far south as Bens Run and Cairo, West Virginia.

MISCELLANEOUS PHENOMENA

Aurora: Bayard, Bens Run, Perry, Piedmont, and Terra Alta, 7th.

Fogs, dense: Arbovale, 2d to the 4th, 6th, 15th to the 19th, 22d, 24th and 25th; Bancroft, 2d, 16th to the 18th, 24th to the 26th, and 29th to the 31st; Elkins, 1st to the 3d, 7th, [illegible] 11th, 15th to the 19th, 25th, 26th, and 30th; Grafton, 2d and 5th; Hinton, 2d, 4th, 11th, 18th, 19th, and 25th; Marlinton, 2d to the 8th, 15th to the 20th, 24th to the 26th, and 28th to the 31st; Pickens, 5th; Rowlesburg, 4th. 15th, 18th, and 24th; Terra Alta, 13th, 22d, 24th, 25th, and 26th; Wellsburg, 1st and 26th; Wheeling, 2d, 17th, 24th, 25th, and 26th.

Thunderstorms (dates and number of stations reporting): 2d, 9; 3d, 1; 4th, 11; 5th, 10; 8th, 5; 9th, 13; 10th, 6; 11th, 9; 12th, 12; 13th, 10; 16th, 1; 19th, 4; 20th, 13; 21st, 13; 22d, 10; 23d, 5; 27th, 3; 28th, 5; 31st, 2.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

VOL. XXXVI PARKERSBURG, W. VA., AUGUST, 1928 No. 8

GENERAL SUMMARY

The temperature and rainfall for August averaged considerably above the normal. The first ten days were especially warm and there were but four or five cool days during the month. The rainfall was well distributed throughout the month and over the State, although 24-hour amounts exceeding two inches were noted at five or six stations. There was abundant sunshine. Practically no damage resulted from hail storms. The month was exceptionally favorable for the growth and ripening of crops. At the close of the month corn was in good to excellent condition and a large crop of potatoes was being dug. The month, however, was rather unfavorable for cultivation, owing to frequent rains.

TEMPERATURE

The monthly mean for the State, determined from 46 stations, was 74.0°. The departure from the normal for 36 stations having ten or more years of record was +2.2°. The temperature was considerably above the normal for the first decade and somewhat above on the 14-15th, and from the 24th to the 30th, inclusive, with the highest temperature occurring generally on the 3d, 8th, and 9th. The temperature was slightly below the normal on the 12-13th, 22-23d, and 31st, with the lowest readings occurring generally on the 12th, 13th, and 23d.

PRECIPITATION

The average precipitation for the State, determined from 85 stations, was 5.36 inches. The departure from the normal for 56 stations having ten or more years of record was + 1.41 inches. The precipitation was generally the heaviest over the central, north-central, and eastern counties, and lightest over the western and northwestern counties. The greater part of the precipitation occurred from the 1st to the 11th, and on the 16-18th, 24-26th and 30th, with the greatest amounts being noted on the 1st-2d, 16th, and 24th.

MODERATE HAIL

Moderate hail fell in sections of Wirt County on the 5th and 21st, and in sections of Harrison County on the 21st.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 4th, 5th, 7th, 8th, 19th, 20th, 28th, and 29th; Bancroft, 2d, 8th, 9th, 13th, 15th, 20th, 23d, 28th, and 29th; Bayard, 25th; Elkins, 9th, 15th, 21st, 23d, 27th, and 28th; Fairmont, 9th and 19th; Grafton, 1st, 2d, 8th, and 9th; Hinton, 1st, 3d, 6th, 8th, 9th, 20th, 21st, 23d, 28th, 29th, and 30th; Marlinton, 3d, 4th, 7th, 9th, 22d, 23d, 28th, 29th, and 30th; Parkersburg, 8th and 9th; Pickens, 12th and 26th; Pt. Pleasant, 8th, 9th, and 20th; Rowlesburg, 17th, 20th, 24th, and 29th; St. Marys, 9th, 19th, and 23d; Terra Alta, 8th, 9th, 15th, 18th, 20th, 23d, and 25th; Wellsburg, 1st and 14th; Wheeling, 9th, 14th, 15th, and 26th.

Thunderstorms (dates and number of stations reporting): 1st, 11; 2d, 6; 3d, 7; 4th, 9; 5th, 7; 6th, 13; 7th, 1; 8th, 6; 9th, 3; 10th, 5; 11th, 3; 14th, 1; 15th, 6; 16th, 3; 17th, 3; 18th, 2; 21st, 8; 22d, 9; 24th, 9; 25th, 1; 26th, 1; 27th, 4; 29th, 1; 30th, 5; 31st, 1.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for August, 1928

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXVI PARKERSBURG, W. VA., SEPTEMBER, 1928 No. 9

GENERAL SUMMARY

The past month, with a temperature average of 61.3°, was the third coolest September of State record. In 1918 and 1924 the September average were 60.5° and 60.7°, respectively. The last decade was especially cool, the daily temperatures averaging about 10° below the normal. From the 25th to the 27th light to killing frosts were general over the State, and on the 26th the temperature was near or somewhat below freezing in most sections. Owing to the lateness of the season, the cold weather caused but little damage, although the ripening of corn was much retarded. The precipitation averaged only slightly below the normal; but over the northern counties the rainfall was considerably deficient, while over the southern and eastern counties the average was somewhat in excess. The conditions were excellent for all outdoor work and farm work advanced rapidly.

TEMPERATURE

The monthly mean for the State, determined from 45 stations, was 61.3°. The departure from the normal for 38 stations having ten or more years of record was −4.5°. The month opened cool and the temperature continued below the normal until the 9th. Moderately warm weather prevailed from the 9th to the 17th, with the highest temperature occurring on the 10th, 14th, and 15th. Cool weather set in on the 18th and continued until the close of the month, the lowest temperatures occurring on the 25th, 26th and 27th.

PRECIPITATION

The average precipitation for the State, determined from 84 tations, was 2.71 inches. The departure from the normal for 7 stations having ten or more years of record was −0.34 ich. Nearly all the rainfall was received on the 3d, 6th, 13th, 4th, 15th, 19-20th and 29-30th, the amounts on the 19-20th eing generally moderately heavy. The rainfall was generally ght on nearly all other dates. Snow was noted on the mountin tops from Pocahontas to Preston counties. Traces of snow ere recorded at Bayard and Terra Alta.

LIGHT HAIL

Light hail was noted in sections of Randolph County on the th, and in sections of Marion, Ohio, and Preston Counties the 25th.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 7th to the 11th, 16th, and 21st; ncroft, 1st, 4th, 7th to the 17th, 23d, and 28th; Bayard, t, 2d, 11th, and 12th; Clarksburg, 2d, 5th, 7th to the 12th, th to the 17th, and 28th; Clay, 2d, 6th, 8th, 10th, 13th, th, 16th, 21st, 24th, 25th, and 28th; Elkins, 2d, 7th to the th, 16th, and 17th; Fairmont, 3d, 6th, 7th, 10th, 11th, and h; Hinton, 8th to the 14th, 16th, 17th, 23d, and 28th; ult, 2d, 8th to the 12th, 14th, 16th, 17th, and 28th; Mannton, 1st, 2d, 4th, 7th, 8th, 10th, 12th, 13th, 16th, 17th, 21st, and 28th; Marlinton, 7th to the 14th, 16th, 17th, 22d, 23d, and 28th; Morgantown, 7th and 8th; Organ Cave, 8th, 9th, 11th, and 12th; Parkersburg, 2d, 9th, 16th, and 28th; Parsons, 8th; Pickens, 30th, Point Pleasant, 4th, 8th, 10th, 12th, 14th, 17th, 26th, and 28th; Rowlesburg, 9th and 10th; St. Marys, 1st, 8th, 10th, 12th, 16th, 17th, 21st, and 28th; Terra Alta, 1st, 2d, 9th to the 12th, 14th, 16th, and 17th; Wardensville, 3d, 6th, 8th, 10th, 11th, 14th, and 15th; Wellsburg, 8th, 10th, and 22d; Wheeling, 1st, 5th, 7th, 9th, 10th, 12th, 16th, 18th, 22d, 28th, and 29th.

Halo, solar: Ryan, 18th.

Thunderstorms (dates and number of stations reporting): 2d, 1; 3d, 2; 13th, 1; 15th, 8; 16th, 2; 19th, 1; 20th, 1; 25th, 3; 26th, 1.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

Daily Precipitation for September, 1928

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXVI Parkersburg, W. Va., October, 1928 No. 10

GENERAL SUMMARY

October was somewhat warmer and considerably drier than usual. The first two decades were especially warm. High temperature occurred on three or four days. The rainfall was unimportant until the 17th, but moderate and well distributed showers occurred on several days after that date. There were no excessive rains. The snowfall was unimportant, except in a few localities of high altitude. The conditions were favorable for picking and packing apples and for late farm work. Pastures were in fair condition until the middle of the month.

TEMPERATURE

The monthly mean for the State, determined from 45 stations, was 56.7°. The departure from the normal for 37 stations having ten or more years of record was +1.6°. The month opened cool, but warm weather set in on the 4th and continued until the 20th. From the 20th to the close of the month the weather was cool, except the 22d and 23d, with the lowest temperature general on the 30th, when the morning readings ranged gener-
lly from 15° to 30°. The highest temperature occurred gener-
lly on the 12th and 17th.

PRECIPITATION

The average precipitation for the State, determined from 84
tations, was 1.98 inches. The departure from the normal for
5 stations having ten or more years of record was —0.97
nch. The precipitation was somewhat the heaviest over the
outhern and central counties and was the lightest over the
xtreme eastern counties. Most of the precipitation was
eceived on the 5th, 9th, 13-14th, 17-19th, and 28th, the great-
st amounts being measured on the 18th and 23d. In the
igher altitudes of the State snow flurries or light snow were
oted daily in sections from the 25th to the 30th. The snow
elted at most stations as fast as it fell, but the following
mounts were measured: Cortland, 3.0 inches; Horton. 1.1
ches; Stony River Dam, 3.0 inches.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 6th; Bancroft, 1st, 4th, 6th, 10th,
th, 13th, 15th, 21st, 22d, 24th, and 26th; Clarksburg, 1st,
, 4th, 6th, 8th, 10th, 12th, 15th, and 21st; Elkins, 1st, 3d,
h, 7th, 8th, 10th, 11th, 13th, 19th, and 21st; Fairmont,
h, 10th, and 21st; Grafton, 2d to the 6th; Hinton, 2d, 4th,
h, 8th, 9th, 11th, 12th, 14th, 19th, 21st, and 30th; Mann-
gton, 1st, 4th, 6th, 7th, 8th, 12th, 15th, and 21st; Marlin-
, 4th, 6th to the 8th, 10th to the 14th, and from the 19th
the 22d; Parkersburg, 1st and 6th; Terra Alta, 4th to the
, 12th, 14th, 15th, 23d, 24th, and 28th; Wheeling, 1st, 3d,
, 6th, 8th, 10th, 11th, 12th, 15th, 21st, 22d, 27th, 30th,
31st.

Hail, light: Buckhannon, 9th.

Sleet: Bayard and Terra Alta, 24th; Mannington and Terra Alta, 25th; Terra Alta, 26th.

Thunderstorms (dates and number of stations reporting): 5th, 2; 6th, 1; 7th, 1; 8th, 3; 9th, 9; 17, 2; 18th, 2; 19th, 1; 25th, 1; 27th, 1.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

† Also on other dates.

†† Received too late to be included in means and summaries.

Reference letters, a, b, c appearing in the table indicate number of missing days; for example, b represents two days, etc.

Daily Precipitation for October, 1928

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXVI Parkersburg, W. Va., November, 1928 No. 11

GENERAL SUMMARY

November averaged somewhat warmer and wetter than usual. The month was about equally divided into periods of moderately warm and moderately cold weather. With the exception of 1927, it was the warmest November since 1921. The greater portion of the precipitation was received on the 19-20th and 29-30th. In the more elevated portions of the State the snowfall was moderate to moderately heavy. In the western and most of the northern counties the snowfall was unimportant. The month was exceptionally cloudy, except over the extreme eastern counties. The conditions were generally favorable for winter wheat. Husking was well advanced at the close of the month.

TEMPERATURE

The monthly mean for the State, determined from 46 stations, was 44.0°. The departure from the normal for 38 stations having ten or more years of record was +1.4°. From the 1st to the 8th the temperature was generally slightly above the normal, but moderately cold weather prevailed from the 9th to the 14th and from the 20th to the 28th, the lowest temperatures occurring generally on the 26th. High temperature prevailed from the 16th to the 18th and on the 29-30th.

PRECIPITATION

The average precipitation for the State, determined from 82 stations, was 3.31 inches. The departure from the normal for 55 stations having ten or more years of record was +0.52 inch. Most of the precipitation occurred on the 3-4th, 8th, 10-11th, 18th-23d, 25th, and 29-30th, the greatest amounts being noted on the 19th and 30th. In the higher altitudes snow fell on the 8th, 10-13th, 20th-23d, 25-26th, and 28th, he amounts being moderate to somewhat heavy in the periods 20th-23d and 25-26th. The following monthly amounts, in nches and tenths, were measured: Pickens, 30.0; Davis, 19.6; Bayard, 19.0; Horton, 18.4; Stony River Dam, 17.5; Arbovale, 11.0.

MISCELLANEOUS PHENOMENA

Fogs, dense: Bancroft, 1st, 2d, 5th, 7th, and 9th; Bayard, d; Charleston, 9th; Crawford, 29th; Elkins, 1st and 14th; airmont, 1st; Glenville, 19th; Hinton, 1st, 2d, 7th, 16th, and 17th; Marlinton, 6th, 7th, 16th, and 17th; Parkersburg, 5th; Pt. Pleasant, 1st, 5th, 7th, and 9th; Terra Alta, 4th, 11th, 13th, 29th, and 30th; Wheeling, 1st, 2d, 5th, 7th, 10th, and 29th.

Sleet: Bayard, 11th; Lost Creek, 20th and 22d; Ryan, 28th; Stony River Dam, 27th; Terra Alta, 12th and 13th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for November, 1928

HENRY C. HOWE, Meteorologist

VOL. XXXVI PARKERSBURG, W. VA., DECEMBER, 1928 No. 12

GENERAL SUMMARY

December was somewhat warmer and much drier than usual, with the average snowfall, 0.9 inch, the least of December State record. The month was free from periods of unusually high or unusually low temperature. A temperature of zero or below was not noted. The precipitation, although light, was fairly well distributed over the State and throughout the month, although more than one-third of the month's precipitation was measured on the 14-15th. There was much fair weather, the average number of clear days, 13, being the record for December, except in 1916, when the average was the same. Owing to freezing and thawing, without snow-cover, the conditions were unfavorable for winter grains.

TEMPERATURE

The monthly mean for the State, determined from 45 stations, was 35.4°. The departure from the normal for 38 stations having ten or more years of record was +2.0°. The temperature was considerably above the normal from the 1st to the 4th, 12th to the 18th, and from the 24th to the 30th, with the highest readings occurring generally on the 13th. The coldest weather prevailed from the 6th to the 10th and the 20th to the 22d, the lowest readings occurring in most sections on the 21st and 22d, although the lowest readings were recorded at 10 stations on the 10th.

PRECIPITATION

The average precipitation for the State, determined from 83 stations, was 2.08 inches. The departure from the normal for 57 stations having ten or more years of record was —1.35 inches. Nearly all the precipitation was measured on the 1st, 5th, 14-15th, 17-18th, and the 27-29th, the greatest amounts being noted on the 14th. In most of the agricultural districts the snowfall was unimportant, ranging generally from a trace o one inch. In most sections of higher altitude light snow fell n the 5th, 7th, 18th, 28th, and 29th. At forty stations the nowfall did not exceed a trace. At Bayard and Pickens the nonthly amounts were 8.5 and 9 inches respectively.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 16th; Bayard, 16th; Bens Run, 2d, 4th, and 16th; Clay, 15th; Elkins, 2d, 14th, 16th, and 20th; airmont, 14th and 16th; Glenville, 13th; Hinton, 4th, 7th, 1th, 16th, 19th, 25th, and 26th; Lewisburg, 16th; Manning-on, 14th and 16th; Marlinton, 2d, 3d, 4th, 14th, 15th, and 3th; Organ Cave, 2d, 3d, and 18th; Parkersburg, 16th; arsons, 14th and 15th; Pickens, 8th and 15th; Terra Alta, 5th, 16th, and 28th; Wellsburg, 13th; Wheeling, 2d, 4th, 6th, 7th, 10th, 11th, 12th, 13th, 16th, 22d, 24th, 26th, 27th, 29th, and 30th.

Halos, lunar: Elkins, 24th and 26th.

Halo, solar: Clarksburg, 30th.

Sleet: Davis, 28th; Lost Creek, 5th.

Thunderstorm: Lewisburg, 14th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

† Also on other dates. †† Received too late to be included in means and summaries

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for December, 1928

CLIMATOLOGICAL DATA

UNIVERSITY OF
MAR 13

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXVI PARKERSBURG, W. VA., YEAR, 1928 No. 13

GENERAL SUMMARY

The year 1928 averaged somewhat colder and slightly wetter than usual. The snowfall averaged about 11 inches above the normal.

February was somewhat warmer than usual and the temperature also averaged above the normal for August and the last three months of the year. The spring months and September were especially cool.

February, May, October, and December were dry months. The precipitation for April, June, and August was much above the normal. The snowfall was unusually heavy in March and April.

The weather was decidedly unfavorable for growth during the spring months and the early part of the summer, but crops made rapid advancement during July and August. October was favorable for grazing and late farm work.

The season of growth extended generally from about May 15 to September 25, being somewhat shorter than usual.

Cloudiness was slightly in excess. The sunshine at Parkersburg and Elkins averaged 42 per cent. of the possible amount, or about 4 per cent. below the normal for Parkersburg and 2 per cent below for Elkins.

The wind movement for Parkersburg was 45,724 miles, and at Elkins 44,477.

THE WEATHER BY MONTHS

JANUARY.—The precipitation for January was only 2.18 inches, the lightest of January State record since 1898. The rivers were low. The temperature averaged normal, the month being divided nearly equally into periods of moderately warm and moderately cold weather. There was practically no snowcover, but winter grains were not much damaged.

FEBRUARY.—February was a warm, dry month, with an excess of cloudiness. The temperature fell to zero at only three stations, Bayard, Pickens, and Terra Alta. The snowfall was about two-thirds of the normal and the ground was bare in most of the agricultural districts practically the entire month. During the first of the month boating on the Ohio River was mpeded by floating ice.

Continued on page 51

THE WEATHER BY MONTHS

Continued from page 49

MARCH.—March was somewhat colder than usual, moderately low temperature prevailing the greater part of the month. The precipitation averaged practically normal. The snowfall was the heaviest of March State record, except in 1914. From late on the 17th until the morning of the 18th the snowfall averaged near 10 inches, being the heaviest snowfall for several years. Fruit buds were dormant at the close of the month.

APRIL—April was decidedly cold and wet. The average snowfall, 11.4 inches, was the heaviest of April State record. Over all the central, north-central and eastern counties the snowfall on the 27-28th averaged nearly 18 inches, and the fall at Bayard was 35 inches, Pickens 30 inches, and at Davis 29.8 inches. This storm caused great damage to fruit trees. Moderate floods occurred in the Monongahela and Potomac Rivers.

MAY. May was cool and dry. Freezing temperatures and light to heavy frosts occurred in many sections until the middle of the month. Cool weather greatly retarded growth and caused an exceptionally heavy fruit-drop. At the close of the month wheat was generally poor and corn small, with poor color.

JUNE.—June, with an average precipitation of 7.37 inches, was not only the wettest June of State record but was also the fourth wettest month of State record. Damaging floods occurred in Morgan, Logan and Wayne Counties. A great flood in Twelve Pole Creek and its tributaries destroyed twenty-five houses, making nearly 300 eople homeless. The month was exceptionally cool, and growth and farm work were uch retarded.

JULY.—July was somewhat warm and dry. The weather was excellent for rapid rowth and all crops were generally in good condition at the close of the month.

AUGUST.—The temperature and rainfall for August averaged considerably above the normal. There was abundant sunshine. The conditions were exceptionally favorable for the growth and ripening of crops.

SEPTEMBER—September was exceptionally cool. From the 25th to the 27th light to killing frosts were general over the State and on the 26th the temperature was somewhat below freezing in most sections. Owing to the lateness of the seasen, the cold weather caused but little damage, although the ripening of corn was much retarded.

OCTOBER.—October was somewhat warmer and considerable drier than usual. The first two decades were especially warm There were moderate showers after the 17th. Pastures were in fair condition until the middle of the month.

NOVEMBER.—November was warmer and wetter than usual. The greater portion of the precipitation was received on the 19-20th and 29-30th. There was considerable snow in the more elevated localities. The conditions were generally favorable for winter wheat.

DECEMBER.—December was somewhat warmer and much drier than usual. The average snowfall, 0.9 inch, was the least of December State record. A temperature of zero or below was not noted. More than one-third of the month's precipitation was measured on the 14-15th. The average number of clear days, 13, equalled the December State record.

ERRATA

The following data should be substituted for those published:

March, 1928, report.—Page 10: Weston, make greatest 24-hour precipitation 1.00 inch.

August, 1928, report.—Page 30: Make prevailing directions of wind for Inwood and Williamson SE. and SW., respectively.

September, 1928, report.—Page 34: Make directions of wind for Bruceton Mills, Lewisburg and Ravenswood SE., NW., and SE., respectively.

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXVII Parkersburg, W. Va., January, 1929 No. 1

GENERAL SUMMARY

January was slightly colder and considerably drier than usual. The snowfall, 6.1 inches, averaged about 2.5 inches below the normal. The highest and lowest temperatures were well within previous January records. There was one well-marked period of warm weather, and rather cold weather prevailed during two short periods. There was generally ample snow-cover during the cold periods. The conditions were favorable for winter grains and for outdoor work.

TEMPERATURE

The monthly mean for the State, determined from 45 stations, was 31.4°. The departure from the normal for 39 stations having ten or more years of record was −0.9°. The month opened warm and the temperature was also above the normal from the 3d to the 5th, 9th to the 11th, and from the 17th to the 25th, the warmest period of the month being from the 14th to the 19th, with the highest temperature on the 18th. The temperature was below the normal from the 12th to the 16th and the 26th to the end of the month, the lowest temperature occurring on the 14th.

PRECIPITATION

The average precipitation for the State, determined from 80 stations, was 2.92 inches. The departure from the normal for 55 stations having ten or more years of record was −0.96 inch. As usual, the precipitation was heaviest over the more elevated portions of the State. It was lightest over the eastern panhandle counties. The greater portion of the precipitation was measured on the 1st, 6th, 10th, 12-13th, 15th, 18-19th, 22d-23d, 25th, and 28th, the amounts being the greatest on the 10th and 18-19th. While light snow fell in most portions of the State from five to ten days, the greatest amounts were measured on the 12-13th, 28th, and the 29-30th and the amounts on other dates were generally unimportant. At Pickens the monthly amount was 31.0 inches.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 17th; Bruceton Mills, 10th; Davis, 5th; Elkins, 21st; Marlinton, 16th; Wheeling, 5th and 16th.
Halo, lunar: Pickens, 18th.
Sleet: Arbovale, 17th and 25th; Bens Run, 22d; Bruceton Mills, 22d; Cairo, 24th; Davis, 25th; Huntington, 2d, 15th, and 28th; Lost Creek, 24th; Marlinton, 5th, 10th, 17th, 21st, and 24th; Martinsburg, 23d and 25th; Moorfield, 22d; Parkersburg, 22d and 24th; Perry, 22d and 25th; Piedmont, 5th and 23d; Terra Alta, 22d and 23d; Wheeling, 24th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

† Also on other dates. †† Received too late to be included in means and summaries

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for January, 1929

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXVII Parkersburg, W. Va., February, 1929 No. 2

GENERAL SUMMARY

February was cold, the average temperature being 30°. It was the coldest February of State record since 1914. The temperature was below the normal for the greater part of the month. The daily plus departures were important for only four or five days. The precipitation averaged practically normal and was well distributed over the State and throughout the month. The snowfall was much above the normal and there was ample snow-cover during the low temperature periods. Sleet was noted at several stations on the 6th, 7th, 9th, 10th, 24th, and 25th, and at Parkersburg on the 19th, but practically no damage resulted. Boating on the Ohio River was impeded by floating ice during the first half of the month. The river was at moderately high stages at the close of the month. The month was favorable for winter grains, but was unfavorable for outdoor work.

TEMPERATURE

The monthly mean for the State, determined from 44 stations, vas 30.0°. The departure from the normal for 36 stations havng ten or more years of record was —2.3°. The temperaure was much below the normal for the first four days, and rom the 9th to the 13th and the 19th to the 24th, with the owest temperatures occurring generally on the 3d and 23d. he temperature was somewhat above the normal on the 6-8th, 6-18th and 26-27th, the highest readings occurring generally n the 19th and 26th.

PRECIPITATION

The average precipitation for the State, determined from 81 ations, was 2.98 inches. The departure from the normal for stations having ten or more years of record was —0.03 ch. The precipitation was heaviest over portions of the uthern and northeastern counties, and generally lightest over e western counties. Most of the precipitation was received the 5-7th, 9-10th, 19th-21st, and 26-28th, the greatest nounts being measured on the 6-7th, 21st, and 26th. Light moderate snow fell at many stations on the 1st and 4-7th eavy snow was general on the 20th-21st, when the amounts nged generally from 8 to 12 inches.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 26th and 28th; Bayard, 28th; Crawd, 6th, 7th, and 28th; Terra Alta, 7th, 9th, and 28th; heeling, 2d, 4th, 5th, 6th, 11th, 13th, 15th, 16th, and 25th.

Sleet: Bayard, 7th; Crawford, 6th and 10th; Davis, 9th; Elkins, 6th and 10th; Glenville, 6th; Huntington, 5th; Marlinton, 6th; Parkersburg, 6th and 19th; Parsons, 6th; Perry, 6th and 7th; Ryan, 25th; Stony River Dam, 28th; Terra Alta, 6th and 7th; Wheeling, 24th.

Thunderstorm: Marlinton, 28th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

† Also on other dates. †† Received too late to be included in means and summaries

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXVII Parkersburg, W. Va., March, 1929 No. 3

GENERAL SUMMARY

The past month, with an average temperature of 46.7°, was the warmest March since 1921. The March average for 1928 was 41.4°. After the first few days the month was nearly continuously warm, and the highest temperatures of March State record occurred in practically all portions of the State on the 25th. The precipitation averaged nearly one-half inch below the normal, and was favorably distributed. The snowfall averaged slightly below the normal and was practically all received during the first six days. High winds were general on the 7th, but practically no damage resulted. Warm weather caused a rapid development of buds. The conditions were also favorable for outdoor work and early farm operations were well advanced at the close of the month.

MODERATE FLOOD

The Ohio in the Parkersburg district was moderately high during the first ten days and flood stages occurred as follows: Marietta, 33.1 feet on the 1st; Point Pleasant, 44.2 feet on the 2d and 40.5 feet on the 8th.

TEMPERATURE

The monthly mean for the State, determined from 43 stations, was 46.7°. The departure from the normal for 37 stations having ten or more years of record was +3.9°. The temperature averaged nearly normal until the 8th. The warm spells were from the 8th to the 11th, 12th to the 16th, and the 19th to the 27th, the highest temperature occurring on the 25th. The 31st was also warm. The lowest temperature was on the 10th.

PRECIPITATION

The average precipitation for the State, determined from 79 stations, was 3.47 inches. The departure from the normal for 55 stations having ten or more years of record was −0.42 inch. Precipitation was quite general on the 1st-2d, 4-6th, 13-14th, 16-17th, 22-23d, 26th, and 30th, the greatest amounts being measured on the 5th and 23d. Most of the snowfall was received on the 2d and 5th.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 4th; Bancroft, 4th, 27th, 29th, and 31st; Charleston, 27th; Clay, 15th and 16th; Hinton, 1st, 5th, 23d, and 24th; Huntington, 26th; Marlinton, 4th, 5th, and 25th; Parkersburg, 27th; Robertsburg, 27th and 31st; Saint Marys, 15th and 27th, Terra Alta, 1st, 5th, 15th, and 26th; Wheeling, 4th, 12th, 13th, 15th, and 27th.

Halos, lunar: Huntington, 26th; Parkersburg, 21st.

Sleet: Parkersburg, 1st and 5th; Marlinton, 4th; Terra Alta, 1st.

Thunderstorms: New Cumberland, 15th; Aberdeen, Bayard, Clarksburg, Crawford, Davis, Elkins, Huntington, Parsons, and Terra Alta, 16th; Glenville, New Cumberland, Parkersburg, and Wellsburg, 26th; Clarksburg, 27th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters, [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

Daily Precipitation for March, 1929
